Solving Optimization Problems with MATLAB® Dingyü Xue,2020-04-06 This book focuses on solving optimization problems with MATLAB Descriptions and solutions of nonlinear equations of any form are studied first Focuses are made on the solutions of various types of optimization problems including unconstrained and constrained optimizations mixed integer multiobjective and dynamic programming problems Comparative studies and conclusions on intelligent global solvers are also provided

**Convex Optimization** Stephen P. Boyd,Lieven Vandenberghe,2004-03-08 Convex optimization problems arise frequently in many different fields This book provides a comprehensive introduction to the subject and shows in detail how such problems can be solved numerically with great efficiency The book begins with the basic elements of convex sets and functions and then describes various classes of convex optimization problems Duality and approximation techniques are then covered as are statistical estimation techniques Various geometrical problems are then presented and there is detailed discussion of unconstrained and constrained minimization problems and interior point methods The focus of the book is on recognizing convex optimization problems and then finding the most appropriate technique for solving them It contains many worked examples and homework exercises and will appeal to students researchers and practitioners in fields such as engineering computer science mathematics statistics finance and economics

Computational Techniques for Text Summarization based on Cognitive Intelligence V. Priya,K. Umamaheswari,2023-03-17 The book is concerned with contemporary methodologies used for automatic text summarization It proposes interesting approaches to solve well known problems on text summarization using computational intelligence CI techniques including cognitive approaches A better understanding of the cognitive basis of the summarization task is still an open research issue an extent of its use in text summarization is highlighted for further exploration With the ever growing text people in research have little time to spare for extensive reading where summarized information helps for a better understanding of the context at a shorter time This book helps students and researchers to automatically summarize the text documents in an efficient and effective way The computational approaches and the research techniques presented guides to achieve text summarization at ease The summarized text generated supports readers to learn the context or the domain at a quicker pace The book is presented with reasonable amount of illustrations and examples convenient for the readers to understand and implement for their use It is not to make readers understand what text summarization is but for people to perform text summarization using various approaches This also describes measures that can help to evaluate determine and explore the best possibilities for text summarization to analyse and use for any specific purpose The illustration is based on social media and healthcare domain which shows the possibilities to work with any domain for summarization The new approach for text summarization based on cognitive intelligence is presented for further exploration in the field

**A Guide to Algorithm Design** Anne Benoit,Yves Robert,Frédéric Vivien,2013-08-27 Presenting a complementary perspective to standard books on algorithms A Guide to

Algorithm Design Paradigms Methods and Complexity Analysis provides a roadmap for readers to determine the difficulty of an algorithmic problem by finding an optimal solution or proving complexity results. It gives a practical treatment of algorithmic complexity and guides readers in solving algorithmic problems. Divided into three parts, the book offers a comprehensive set of problems with solutions as well as in-depth case studies that demonstrate how to assess the complexity of a new problem. Part I helps readers understand the main design principles and design efficient algorithms. Part II covers polynomial reductions from NP-complete problems and approaches that go beyond NP-completeness. Part III supplies readers with tools and techniques to evaluate problem complexity, including how to determine which instances are polynomial and which are NP-hard. Drawing on the authors' classroom-tested material, this text takes readers step by step through the concepts and methods for analyzing algorithmic complexity. Through many problems and detailed examples, readers can investigate polynomial-time algorithms and NP-completeness and beyond.

**Genetic Algorithms + Data Structures = Evolution Programs** Zbigniew Michalewicz, 1996-03-21 The importance of these techniques is still growing since evolution programs are parallel in nature and parallelism is one of the most promising directions in computer science.

**Cognitive Radio Communication and Networking** Robert Caiming Qiu, Zhen Hu, Husheng Li, Michael C. Wicks, 2012-09-10 The author presents a unified treatment of this highly interdisciplinary topic to help define the notion of cognitive radio. The book begins with addressing issues such as the fundamental system concept and basic mathematical tools such as spectrum sensing and machine learning before moving on to more advanced concepts and discussions about the future of cognitive radio. From the fundamentals in spectrum sensing to the applications of cognitive algorithms to radio communications and discussion of radio platforms and testbeds to show the applicability of the theory to practice, the author aims to provide an introduction to a fast-moving topic for students and researchers seeking to develop a thorough understanding of cognitive radio networks. Examines basic mathematical tools before moving on to more advanced concepts and discussions about the future of cognitive radio. Describes the fundamentals of cognitive radio providing a step-by-step treatment of the topics to enable progressive learning. Includes questions, exercises, and suggestions for extra reading at the end of each chapter. Topics covered in the book include: Spectrum Sensing, Basic Techniques, Cooperative Spectrum Sensing, Wideband Spectrum Sensing, Agile Transmission Techniques, Orthogonal Frequency Division Multiplexing, Multiple Input Multiple Output for Cognitive Radio, Convex Optimization for Cognitive Radio, Cognitive Core I Algorithms for Reasoning and Learning, Cognitive Core II, Game Theory, Cognitive Radio Network, IEEE 802.22 The First Cognitive Radio Wireless Regional Area Network Standard and Radio Platforms and Testbeds.
