Object-Oriented Analysis and Design Using UML MATHA, MAHESH P.,2008-04-09 A modern computer program such as the one that controls a rocket's journey to moon is like a medieval cathedral vast complex layered with circuits and mazes To write such a program which probably runs into a hundred thousand lines or more knowledge of an object oriented language like Java or C is not enough Unified Modelling Language UML elaborated in detail in this book is a methodology that assists in the design of software systems The first task in the making of a software product is to gather requirements from the client This well organized and clearly presented text develops a formal method to write down these requirements as Use Cases in UML Besides it also develops the concepts of static and dynamic modelling and the Unified Process that suggests incremental and iterative development of software taking client feedback at every step The concept of Design Patterns which provide solutions to problems that occur repeatedly during software development is discussed in detail in the concluding chapters Two appendices provide solutions to two real life problems Case Studies mapping of examples into Java code that are executable on computers summary and Review Questions at the end of every chapter make the book reader friendly The book will prove extremely useful to undergraduate and postgraduate students of Computer Science and Engineering Information Technology and Master of Computer Applications MCA It will also benefit professionals who wish to sharpen their programming skills using UML

Intellectual Property Law Q and A Alan Murdie,2000-12 In the 21st century intellectual property law continues to be a challenging and immensely varied subject and one of great contemporary relevance Embracing a wide range of human endeavours from science and new technology to the entertainment industry it is intimately tied up with the expansion of publishing and commerce over the Internet At the same time the courts have continued to show that many older principles of intellectual property law have a contemporary relevance and may be creatively applied to address modern problems and situations Questions and Answers on Intellectual Property Law aims to equip students with a grounding in the key concepts in intellectual property law With a mixture of both problem and essay questions many based on real situations it demonstrates how to answer both course work and exam questions effectively It includes chapters on copyright design rights the law of registered and unregistered trade marks character merchandising and malicious falsehood Extensively revised and updated since the last edition it provides both a valuable teaching aid and study guide

Drug Discovery in Pancreatic Cancer

Haiyong Han, Paul Grippo, 2010-03-11 Pancreatic cancer is the fourth leading cause of cancer death in the United States. Every year about 33 700 people in the United States will be diagnosed with pancreatic cancer and over 32 000 patients will die from the disease. The median survival of patients with advanced pancreatic cancer is about 6 months. This dismal picture of pancreatic cancer is mainly due to the lack of early diagnosis and effective treatment for patients with advanced disease. To increase the survival rate of pancreatic cancer patients, better tumor markers for diagnosis and new molecular targets for drug development are desperately needed. A lot of effort has been made in searching for pancreatic cancer causing genes or genes associated with progression of malignant behavior in pancreatic cancer. As a result, alterations in the expression of several cancer related genes have been identified in pancreatic tumors. The identification and characterization of these cancer related genes have significantly increased our understanding of pancreatic cancer development but unfortunately the treatment of pancreatic cancer has not advanced as much in the past 20 years. Over the past decade, tremendous advances have been made in the field of cancer drug discovery, particularly in the area of molecular and genetic models and technologies. Many of those advanced models and technologies have been applied to the drug discovery processes for pancreatic cancer. In this book, a team of experts will describe the latest development in the application of these models and technologies in pancreatic cancer. The authors include basic researchers as well as clinicians who work in the front line of the war against pancreatic cancer and have the first hand experience on these cutting edge tools and techniques. The book can be divided into two general areas: 1. model systems and 2. genomics and proteomics tools. In recent years, there have been a lot of advances in the model systems for pancreatic cancer, including the further characterization of normal and cancerous pancreatic cell lines, the establishment of transgenic mouse models that recapitulate the initiation and progression of human pancreatic cancer, the development of a new xenograft model system for the evaluation of novel agents, and the establishment of a zebrafish pancreatic cancer model. The first four chapters of the book will be devoted to these models. The advances in genomics and proteomics research have made a major impact in cancer drug discovery. A number of these omics based tools and techniques have been applied in the pancreatic cancer drug discovery. Chapters 5-9 of the book will discuss techniques for genome wide examination of gene expression, copy number, methylation, function and regulation. Chapters 10-11 will discuss in situ techniques for studying chromosomal and gene copy number abnormalities as well as protein expression changes in cancer samples. Chapters 12-14 will focus on techniques for global examination of protein expression levels in biospecimens obtained from pancreatic cancer patients. Cancer drug discovery has become more and more target centric.
