Stearns,Donald R. Hush,2002-08-28 In a field as rapidly expanding as digital signal processing even the topics relevant to the basics change over time both in their nature and their relative importance It is important therefore to have an up to date text that not only covers the fundamentals but that also follows a logical development that leaves no gaps readers must somehow bridge by themselves Digital Signal Processing with Examples in MATLAB is just such a text The presentation does not focus on DSP in isolation but relates it to continuous signal processing and treats digital signals as samples of physical phenomena The author also takes care to introduce important topics not usually addressed in signal processing texts including the discrete cosine and wavelet transforms multirate signal processing signal coding and compression least squares systems design and adaptive signal processing He also uses the industry standard software MATLAB to provide examples of signal processing system design spectral analysis filtering coding and compression and exercise solutions All of the examples and functions used in the text are available online at www.crcpress.com Designed for a one semester upper level course but also ideal for self study and reference Digital Signal Processing with Examples in MATLAB is complete self contained and rigorous For basic DSP it is quite simply the only book you need Contemporary Communication Systems Using MATLAB John G. Braille code Figure 1 is a 6 bit code and can therefore represent 64 symbols the code of six flat dots indicates a blank space Braille s followers extended the capabilities of his code in several ways One im portant extension is contractions These are letters that when they stand alone mean words For example the letter b standing alone or with punctuation means the word but the letter e standing alone means every and p means people Another extension is short form words These are combinations of two or more codes that mean an entire word short form words may contain contractions For example ab means about rcv means receive and the mvs means themselves The the in parentheses is a contraction dots 2 3 4 6 Figure 2 shows some examples of these special codes
