

The relation between the OIE *Terrestrial Manual* and the OIE *Terrestrial Code*

- Although the OIE list of Prescribed and Alternative Tests gives only summary descriptions of the tests (e.g. “ELISA”, or “PCR”) it should not be assumed that all tests under that description are suitable for international movement. Only the method described in the *Terrestrial Manual* should be used, or else a method that has been fully validated to show equivalent performance to the designated Prescribed Test method. “Validation” in this context means compliance with the OIE validation template and the more detailed description in the validation chapter of the *Terrestrial Manual*.

The Veterinary Laboratory and Field Manual 3rd Edition Susan C. Cork,Roy Halliwell,2019-06-03 Isolated regions of the world are often at the forefront of emerging diseases and to be effective in disease prevention and control they require basic resources for field sample collection and testing in conditions vastly different from those available in well equipped reference laboratories Technical support for field extension staff and the availability of reliable diagnostic testing facilities are also vital to ensure sustainable livelihoods for subsistence farmers This technical handbook aims to provide an easy to follow overview of the basic laboratory techniques and sample collection guidelines that we consider useful for staff working in district veterinary facilities in regions that lack the infrastructural support available for staff with ready access to

national veterinary laboratories The Veterinary Laboratory and Field Manual 3rd Edition provides the reader with a summary of basic diagnostic procedures and sample submission guidelines and also advocates for improved communication between animal health extension staff veterinarians laboratory staff and farmers Case studies are used to illustrate key concepts Basic laboratory disciplines are covered including parasitology microbiology haematology serology immunology and pathology There are also sections on laboratory infrastructure and equipment There is additional content on common clinical presentations One Health approaches to Antimicrobial resistance the role of the OIE disease surveillance and wildlife disease monitoring Supplementary tools for use in the field and laboratory are also available online This new edition of The Veterinary Laboratory and Field Manual is updated to include content on pen side tests selection and integration of new technologies engagement with international agencies and programs and the One Health approach to disease monitoring Animal Health extension staff in isolated regions of the world and NGOs can benefit from this book as well as policy makers supporting veterinary work in rural areas and veterinary para professionals involved in One Health work 5m Books First International Conference of the OIE Reference Laboratories and Collaborating Centres, Florianopolis, Brazil, 3-5 December 2006 Michel Lombard, Betty Dodet, 2007 The OIE Global Network of Reference Laboratories and Collaborating Centres is a key resource for the early and accurate diagnosis of animal disease pathogens and information pertaining to them It provides expert support with the supply of science based international reagents as well as the development of standards and guidelines for animal welfare and the food safety aspects of animal production and recommendations for the prevention detection and control of diseases such as zoonoses The first international meeting of experts from OIE Reference Laboratories and Collaborating Centres addressed the updating and setting of standards for methodologies in the fields of diagnostics vaccine quality and biosecurity the improvement of methods for internet networking and the building of closer links between existing Reference Laboratories Collaborating Centres and national and private veterinary laboratories It demonstrated the need for OIE institutions to support developing and in transition countries in facing current challenges and new threats linked to globalization and climate change through twinning capacity building and training programs

Emerging Infectious Diseases ,2012 **Innovations in cryoconservation of animal genetic resources** Food and Agriculture Organization of the United Nations, Boes, J, Boettcher, P, Honkatukia, M, 2023-01-17 The livestock sector faces a range of challenges including climate change emerging diseases competition for natural resources and evolving demand for animal source foods which is increasing globally especially in developing countries Genetic diversity of livestock is a key resource for allowing livestock keepers to address these challenges but this diversity has been in a state of decline The diminishing genetic diversity thus represents yet another obstacle for sustainable livestock production Cryoconservation i e ex situ in vitro conservation of genetic resources through gene banking provides one of the most powerful tools governments and other stakeholders have to manage genetic diversity in both the short and long term and thereby provide future

generations with the tools to meet the challenges ahead Gene banking genetic resources fits within the context of the Global Plan of Action for Animal Genetic Resources which was developed and adopted by FAO Member Nations Specifically Strategic Priority 9 of the Global Plan of Action is Establish or strengthen ex situ conservation programmes and Strategic Priority 11 urges countries to Develop approaches and technical standards for conservation To assist countries in the implementation the Global Plan of Action FAO worked with experts from around the world to prepare technical guidelines In 2012 FAO published FAO Guidelines on Cryoconservation of animal genetic resources Gene banking is a long term effort that needs to be viewed in terms of decades rather than years as demonstrated by similar systems for agricultural crops The responsibility for establishing such resources lies squarely within governments roles of providing public goods and food security Gene banking of animal genetic resources is a technology intense undertaking and the associated technologies are in a continual state of research and development The livestock sector also continues to evolve rapidly Since the development and release of the previous guidelines numerous changes have taken place Critical among these is a greater appreciation of the opportunities for actively utilizing cryopreserved material to enhance management of in vivo populations rather than as simply an insurance policy to protect breeds against extinction This key development has led to further changes in gene bank management First interaction with users of the stored material has increased This in turn has created a need to involve stakeholders more closely in the management of genetic collections and to better monitor and document the processes of gene banking to ensure quality management

Risk-based examples and approach for control of *Trichinella* spp. and *Taenia saginata* in meat Food and Agriculture Organization of the United Nations ,World Health Organization,2020-11-03 Human trichinellosis is caused by the consumption of raw or inadequately treated meat from domestic or game animals containing the larvae of parasites of the *Trichinella* species *Taenia saginata* causes bovine cysticercosis a parasitic disease of cattle by the larval stage *Cysticercus bovis* of the human tapeworm *Taenia saginata* Taeniosis infection of humans with the adult tapeworm occurs following consumption of beef with cysticerci that has not been sufficiently heated or frozen to kill the parasite This report provides the spreadsheet models resulted in effective generation of the quantitative information needed by public health officials when evaluating different postmortem meat hygiene programmes for *Trichinella* spp and *Taenia saginata* in meat The models enable the development of science based risk scenarios to assess the effect of various changes to digestion testing and meat inspection for *Trichinella* spp and *Taenia saginata* on the residual risk of human trichinellosis and taeniosis The outcome of estimation is based on changes in relative risks rather than specific estimates of risk
