Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be acquired by children and for that matter anyone learning a second language We are not born with an innate ability to read A reading system of mental representations that

enables us to read must be formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words with pre existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography Reading on the other hand requires only the recognition of a word for pronunciation Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions Most children learn to read and spell their language at the same time thus the co ordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition Lack of progress in either reading and or spelling is also a major issue of concern for parents and teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in neuroscience cognitive science experimental psychology and education The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues Contributions from different perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of literacy including cross orthographic research

Novice Mathematics Teachers' Professional Learning Xiaoli Lu,2022-05-04 This book investigates three novice high school mathematics teachers professional learning processes in the early stages of their careers at schools in Shanghai China Teacher professional learning is examined as a complex and dynamic system that connects both cognitive and situated perspectives on learning theory Inspiring mathematics teachers to adopt student focused pedagogies is challenging particularly in China where tensions in teacher centred content focused and examination oriented practices are predominant The three novice teachers who participated in this study brought different beliefs and knowledge derived from their different individual experiences to bear on their teaching practices However they were strongly influenced by the environments in

which they taught and mainly adopted a professional learning approach to teacher centred practices despite reporting that they favoured student centred teaching practices The study also observed professional learning towards student centred pedagogical aspects in a single teacher case with mentorship support indicating that student centred pedagogies may be promoted within the constraints of the existing dominant teaching practice

Selected Papers from the 2018 IEEE International Workshop on Metrology for the Sea Attilio Di Nisio, Francesco Picariello, 2020-11-13 This Special Issue is devoted to recent developments in instrumentation and measurement techniques applied to the marine field The sea is the medium that has allowed people to travel from one continent to another using vessels even today despite the use of aircraft It has also been acting as a great reservoir and source of food for all living beings However for many generations it served as a landfill for depositing conventional and nuclear wastes especially in its deep seabeds and we are assisting in a race to exploit minerals and resources different from foods encompassed in it Its health is a great challenge for the survival of all humanity since it is one of the most important environmental components targeted by global warming As everyone may know measuring is a step that generates substantial knowledge about a phenomenon or an asset which is the basis for proposing correct solutions and making proper decisions However measurements in the sea environment pose unique difficulties and opportunities which is made clear from the research results presented in this Special Issue
