Mathematics Linear B Foundation Paper June 2013:

Sudden arrhythmic death: from basic science to clinical practice Gareth D. Matthews, 2014-10-02 With upwards of 4.5 million deaths worldwide each year and more than one tenth of these occurring in those with no previously documented heart disease sudden arrhythmic death (SAD) is both a major public health burden and a highly emotive issue for society at large. Recent years have witnessed a marked expansion in our knowledge of the physiology underlying SAD both in the context of hereditary and acquired cardiac disorders. Thanks largely to work in genetically modified animals the growth in our understanding of mechanisms underlying arrhythmia in the hereditary channelopathies has been particularly marked. Our growing knowledge of the fundamental mechanisms underlying SAD has so far failed to spur substantial developments in clinical practice. Despite a large body of work in both humans and animals it remains impossible to confidently identify those at high risk of SAD making pre-emptive therapy a challenge. What is more with the thankful exception of the implantable cardioverter defibrillators and pharmacological agents in very specific situations there has been depressingly little progress in finding new and effective therapies. This Research Topic aims to go some way towards bridging the gap between advances in basic science and the development and delivery of new therapies. It brings together original research contributions and review articles from key opinion leaders in the field focusing on the direct clinical implications of the basic science research now and in the future.

Green, Energy-Efficient and Sustainable Networks Josip Lorincz, Antonio Capone, Luca Chiaraviglio, Jinsong Wu, 2020-01-21 The book *Green Energy Efficient and Sustainable Networks* provides insights and solutions for a range of problems in the field of obtaining greener energy efficient and sustainable networks. The book contains the outcomes of the Special Issue on Green Energy Efficient and Sustainable Networks of the *Sensors* journal. Seventeen high quality papers published in the Special Issue have been collected and reproduced in this book demonstrating significant achievements in the field. Among the published papers one paper is an editorial and one is a review while the remaining 15 works are research articles. The published papers are self contained peer reviewed scientific works that are authored by more than 75 different contributors with both academic and industry backgrounds. The editorial paper gives an introduction to the problem of information and communication technology (ICT) energy consumption and greenhouse gas emissions presenting the state of the art and future trends in terms of improving the energy efficiency of wireless networks and data centers as the major energy consumers in the ICT sector. In addition the published articles aim to improve energy efficiency in the fields of software defined networking, Internet of things, machine learning authentication, energy harvesting, wireless relay systems, routing metrics, wireless sensor networks, device to device communications, heterogeneous wireless networks and image sensing. The last paper is a review that gives a detailed overview of energy efficiency improvements and methods for the implementation of fifth generation networks and beyond. This book can serve as a source of information in industrial teaching and or research and development activities. The book is a valuable source of information since it presents

recent advances in different fields related to greening and improving the energy efficiency and sustainability of those ICTs particularly addressed in this book

Game-Theoretic Learning and Distributed Optimization in Memoryless Multi-Agent Systems Tatiana Tatarenko, 2017-09-19 This book presents new efficient methods for optimization in realistic large scale multi agent systems These methods do not require the agents to have the full information about the system but instead allow them to make their local decisions based only on the local information possibly obtained during communication with their local neighbors The book primarily aimed at researchers in optimization and control considers three different information settings in multi agent systems oracle based communication based and payoff based For each of these information types an efficient optimization algorithm is developed which leads the system to an optimal state The optimization problems are set without such restrictive assumptions as convexity of the objective functions complicated communication topologies closed form expressions for costs and utilities and finiteness of the system's state space
