A Homology Theory for Smale Spaces Ian F. Putnam,2014-09-29 The author develops a homology theory for Smale spaces which include the basics sets for an Axiom A diffeomorphism It is based on two ingredients The first is an improved version of Bowen's result that every such system is the image of a shift of finite type under a finite to one factor map The second is Krieger's dimension group invariant for shifts of finite type He proves a Lefschetz formula which relates the number of periodic points of the system for a given period to trace data from the action of the dynamics on the homology groups The existence of such a theory was proposed by Bowen in the 1970s *Nuclear Safety* ,1963 **Books in Print Supplement** ,1984 **Publications of the National Bureau of Standards, July 1, 1957, to June 30, 1960** United States. Thomas,2021-06-18 This paper is a contribution to the study of the subgroup structure of exceptional algebraic groups over algebraically closed fields of arbitrary characteristic Following Serre a closed subgroup of a semisimple algebraic group G is called irreducible if it lies in no proper parabolic subgroup of G In this paper we complete the classification of irreducible connected subgroups of exceptional algebraic groups providing an explicit set of representatives for the conjugacy classes of such subgroups Many consequences of this classification are also given These include results concerning the representations of such subgroups on various G modules for example the conjugacy classes of irreducible connected subgroups are determined by their composition factors on the adjoint module of G with one exception A result of Liebeck and Testerman shows that each irreducible connected subgroup X of G has only finitely many overgroups and hence the overgroups of X form

a lattice We provide tables that give representatives of each conjugacy class of connected overgroups within this lattice structure We use this to prove results concerning the subgroup structure of G for example when the characteristic is 2 there exists a maximal connected subgroup of G containing a conjugate of every irreducible subgroup A_1 of G *Oceanographical Engineering* Robert L. National Bureau of Standards, 1986 **Negatively Buoyant Jets in a Cross Flow** Jerry Lee Anderson, Frank L. Parker, Barry A. Benedict, 1973 Negatively buoyant jets or sinking jets can be observed in many problems of pollutant discharge Any chemical waste that is heavier than the receiving water into which it is discharged may act as a negatively buoyant jet In addition when water is taken from the hypolimnion of a deep lake or reservoir and used as cooling water the temperature and consequently the discharge may behave like a negatively buoyant jet Two existing jet diffusion models have been utilized to predict the trajectory and dilution of a positively buoyant jet or a

rising jet and have been modified to account for the sinking effect Twenty four experimental investigations were conducted involving different combinations of densimetric Froude number velocity ratios and initial angle of discharge Salt was used as the tracer yielding a fluid that was denser than the ambient receiving water and facilitated measuring concentration profiles of the jet plume The coefficient of entrainment the major mechanism of dilution was determined as a function of the densimetric Froude number velocity ratio and initial angle of discharge The reduced drag coefficient was chosen as zero for both models since any other value would predict a trajectory whose rise would be less than experimentally observed For all angles of discharge the entrainment coefficient increased with a decrease in the velocity ratio and with an increase in densimetric Froude number Additionally there was a marked decrease in the entrainment coefficient with a decrease in the initial angle of discharge Page ii **Research Reporting Series** ,1973 *Normed Amenability and Bounded Cohomology over Non-Archimedean Fields* Francesco Fournier-Facio,2024-08-19 View the abstract
