

Molecular Basis of Inheritance Part 2

Chapter 16

Overview:

- Review of DNA Structure
- DNA Replication
 - How is a strand of DNA copied to make 2 identical copies?

DNA Replication and Base Pairing

- The **relationship** between **structure** and **function** is manifested in the **double helix**.
- Watson and Crick noted that the **specific base pairing** suggested a possible **copying mechanism** for genetic material

Replication of DNA

- Replication occurs when DNA is **not condensed** into discrete chromosomes
- There are 46 Chromosomes in a human cell
- All 46 chromosomes comprise approximately **6 billion base pairs**
 - If you were to write all the bases as letters into books the size of "Campbell Biology", the human genetic code would amount to about 1,200 textbooks

How does 1 DNA molecule become 2?

- During DNA replication:
 - **Original DNA molecule** is the **template** for making an exact copy
- But, is the new DNA molecule?
 - 1) a **completely new copy** of the original- "**Conservative Model**"
 - 2) **half** the original template and **half** a new copy- "**Semiconservative Model**"
 - 3) **mixed pieces** of original and new- "**Dispersive Model**"

The "Semiconservative" Model

- Watson and Crick's **semiconservative model** of replication
- Predicts that when a double helix replicates, **each daughter molecule will have:**
 - 1) **1 old strand** ("conserved" from "parent" molecule) and
 - 2) **1 newly made strand**

The Basic Principle: Base Pairing to a Template Strand

- Since the two strands of DNA are complementary, **each strand acts as a template** for building a new strand in replication
- In DNA replication, the parent molecule **unwinds**, and two new daughter strands are built based on base-pairing rules

Community/Public Health Nursing - E-Book Mary A. Nies,Melanie McEwen,2013-12-27 Covering the nurse s role in promoting community health Community Public Health Nursing 5th Edition is known for its upstream preventive focus and social justice approach photo novellas with clinical stories and a concise readable style It shows how you as a nurse can take an active role in social action and health policy especially in caring for diverse population groups Expert authors Mary A Nies

and Melanie McEwen discuss today's issues and trends and describe the key issues and responsibilities of contemporary community public health nursing. An upstream focus addresses factors that are the precursors to poor health in the community. A social justice approach promotes health for everyone. Photo novellas use photographs to tell stories showing real life clinical scenarios and applications of important community health nursing roles. Case Study Application of the Nursing Process feature presents specific community components of the nursing process separately from individual and family. Clinical examples offer snippets of real life client situations. Research Highlights boxes show the application of current research to chapter content. Ethical Insights boxes highlight ethical issues and concerns. Healthy People 2020 boxes summarize objectives and their importance in community health. Objectives, key terms, and chapter outlines introduce important concepts and terminology at the beginning of every chapter. Learning Activities at the end of each chapter ask you to apply concepts to the world outside the classroom. New Health Promotion and Risk Reduction chapter details the promotion of health and presents strategies that can identify risk factors for illness. Faith Community Nursing chapter reflects current terminology from the ANA's Scope and Standards of Practice and includes more coverage of the spiritual health of clients. Health A Community View chapter expands its discussion of the continual challenges and strategies associated with the delivery of health care. Communicable Disease chapter includes new information about public health surveillance, outbreaks, and bioterrorism. Cultural Diversity and Community Health Nursing chapter features new content on complementary and alternative therapies.

Each volume serves to update the reader's knowledge on the broader field of addiction as well as to deepen understanding of specific addictive substances. Volume 3 addresses prescription medications, caffeine, polydrug misuse, and non drug addictions. Each section provides data on the general molecular, cellular, structural, and functional neurological aspects of a given substance with a focus on the adverse consequences of addictions. Research shows that the neuropathological features of one addiction are often applicable to those of others and understanding these commonalities provides a platform for studying specific addictions in more depth and may ultimately lead researchers toward new modes of understanding causation, prevention, and treatment. However, marshalling data on the complex relationships between addictions is difficult due to the myriad of material and substances. Offers a modern approach to understanding the pathology of substances of abuse, offering an evidence-based ethos for understanding the neurology of addictions. Fills an existing gap in the literature by serving as a one
