

CHAPTER 3 | Where Prices Come From: The Interaction of Demand and Supply

Brief Chapter Summary and Learning Objectives

3.1 The Demand Side of the Market (pages 74–82)

List and describe the variables that influence demand.

- The most important factor affecting the demand for a product is its price. Other factors include income, prices of related goods, tastes, population and demographics, and expected future prices.

3.2 The Supply Side of the Market (pages 82–86)

List and describe the variables that influence supply.

- The most important factor affecting the supply for a product is its price. Other factors include prices of inputs, technological change, prices of related goods in production, the number of firms in the market, and expected future prices.

3.3 Market Equilibrium: Putting Demand and Supply Together (pages 86–89)

Use a graph to illustrate market equilibrium.

- The intersection of demand and supply curves results in an equilibrium price and an equilibrium quantity.
- A surplus exists when the market price is above the equilibrium price. A shortage exists when the market price is below the equilibrium price.

3.4 The Effect of Demand and Supply Shifts on Equilibrium (pages 90–97)

Use demand and supply graphs to predict changes in prices and quantities.

- An increase in demand increases the equilibrium price and equilibrium quantity. A decrease in demand decreases the equilibrium price and equilibrium quantity.
- An increase in supply decreases equilibrium price and increases the equilibrium quantity. A decrease in supply increases equilibrium price and decreases the equilibrium quantity.
