Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

Many people from warm regions carry an **allele** that provides resistance to **malaria**. Two copies of this allele, however, causes a deadly blood disorder called **sickle cell anemia**.

1. Suppose two parents are healthy carriers of the sickle-cell allele. The **genotype** of each parent is AS (A is the normal allele, and S is the sickle-cell allele).

How likely is it for a child of these parents to have sickle cell anemia (SS)? **50%**

2. Do you think the allele for sickle cell anemia would be common in regions where malaria did not exist? Explain why or why not. **No, the allele for sickle cell anemia would not be common as the region would not be exposed to malaria, thus would not need a resistance towards it.**

Gizmo Warm-up

If natural selection does not favor one trait over another, the frequencies of various alleles in a population will tend to be stable over long periods of time. But what happens when one allele confers an advantage or disadvantage to an individual? These scenarios and others can be explored with the *Microevolution* Gizmo.

1. The feather color of the parrots in the Gizmo is controlled by two alleles, D and d . The D allele is **incompletely dominant** over d . What is the feather color of each parrot genotype?

DD **Dark green**

Dd **Light green**

dd **yellow**

2. The **fitness** of parrots is determined by how well they blend into the background trees. Set the **Fitness of DD** slider to 100% and the other fitness sliders to 60%.

The birds with which genotype blend into the background now? **DD**

3. Click **Begin**, and then click **Predator**. Which parrots were killed by **predators**? **Dd and dd**
