

Special Senses

[illegible]

BLIND SPOT

As you travel down either optic, your **nasal** eye is kept on the focus of your eye, filled with **photoreceptors** that convert light into impulses that the brain can understand. This is how you see.

When **optic nerves** connect, **retinas**, **photoreceptors** receive images and convert to **nerve** impulses. These are **photoreceptors**, **rods** or **cones**. **Blind spot** of the eye that you don't "notice" your "blind spot" because you are always with two eyes put together. That's how you compensate for your blind spot.

The diagram shows a cross-section of the human eye. The optic nerve is shown exiting the back of the eye. A line points to the exit point, labeled 'Blind spot'. Another line points to the area of the retina where the optic nerve exits, labeled 'Blind spot'. A third line points to the area of the retina where the optic nerve enters, labeled 'Blind spot'.

BLIND SPOT

The steps:

1. On this picture your teacher has provided 4 of 5, contained with a permanent marker in the cardboard, trace dot and a star, as shown in the diagram below.
2. Hold this card in your view with an extra length away, make sure that the star is on the left side.
3. Close your left eye, and look at the star with your right eye. Focus at the star, because when you do be aware of this dot, slowly move the card closer to your face.
4. At one point, the dot will disappear and then reappear. This is your blind spot.

ANATOMY OF THE TONGUE

ANATOMY OF THE TONGUE

The diagram illustrates the anatomy of the tongue from two perspectives: dorsal (top) and ventral (bottom). The dorsal view shows the tongue's surface, with labels for the epiglottis, pharynx, larynx, trachea, and bronchi. The ventral view shows the underside of the tongue, with labels for the epiglottis, pharynx, larynx, trachea, and bronchi.

TASTE & SMELL

The Nose

1. Explain a system of different receptors that you receive why 2 flavors of chocolate, 4 flavors of bananas, 3 flavors of lemons
2. Describe all various important odors
3. Describe a method how they work, they start when released in your mouth, enter lungs, then work through nose and into cells of the brain, the signals are received and processed, sent into the consciousness and into action. For the 2 chocolates and 3 lemons and 4 bananas, I think it would be very difficult to tell apart, but not impossible to tell apart
4. Describe how the nose works, there is a structure called the olfactory bulb, which is located in the brain, and it is the only part of the brain that is directly connected to the nose. The nose has a "brain" of sorts, the olfactory bulb, which is the part of the brain that is directly connected to the nose.
5. In the end, explain that the nose is the most important part of the body.
