Detection and Estimation of Working Memory States and Cognitive Functions Based on Neurophysiological Measures Felix Putze, Christian Mühl, Fabien Lotte, Stephen Fairclough, Christian Herff, 2019-02-05 Executive cognitive functions like working memory determine the success or failure of a wide variety of different cognitive tasks such as problem solving navigation or planning Estimation of constructs like working memory load or memory capacity from neurophysiological or psychophysiological signals would enable adaptive systems to respond to cognitive states experienced by an operator and trigger responses designed to support task performance e g by simplifying the exercises of a tutor system when the subject is overloaded or by shutting down distractions from the mobile phone The determination of cognitive states like working memory load is also useful for automated testing assessment or for usability evaluation While there exists a large body of research work on neural and physiological correlates of cognitive functions like working memory activity fewer publications deal witt the application of this research with respect to single trial detection and real time estimation of cognitive functions in complex realistic scenarios Single trial classifiers based on brain activity measurements such as electroencephalography functional near infrared spectroscopy physiological signals or eye tracking have the potential to classify affective or cognitive states based upon short segments of data For this purpose signal processing and machine learning techniques need to be developed and transferred to real world user interfaces The goal of this Frontiers Research Topic was to advance the State of the Art in signal based modeling of cognitive processes We were especially interested in research towards more complex and realistic study designs for example collecting data in the wild or investigating the interaction between different cognitive processes or signal modalities Bringing together many contributions in one format allowed us to look at the state of convergence or diversity regarding concepts methods and paradigms Machine Learning and Python for Human Behavior, Emotion, and Health Status Analysis Md Zia Uddin, 2024-08-30 This book is a practical guide for individuals interested in exploring and implementing smart home applications using Python Comprising six chapters enriched with hands on codes it seamlessly navigates from foundational concepts to cutting edge technologies balancing theoretical insights and practical coding experiences In short it is a gateway to the dynamic intersection of Python programming smart home technology and advanced machine learning applications making it an invaluable resource for those eager to explore this rapidly growing field Key Features Throughout the book practicality takes precedence with hands on coding examples accompanying each concept to facilitate an interactive learning journey Striking a harmonious balance between theoretical foundations and practical coding the book caters to a diverse audience including smart home enthusiasts and researchers The content prioritizes real world applications ensuring readers can immediately apply the knowledge gained to enhance smart home functionalities Covering Python basics feature extraction deep learning and XAI the book provides a comprehensive guide offering an overall understanding of smart home applications

each other She discusses such topics as interfaciality and the face as a medium self image and the boundaries of the self understood through technological mediation of an embodied experience the relation between the self and the other reshaped by algorithmic technologies and the augmentation and alteration of spatial perception The artworks Fedorova discusses present scenarios of interfacing that range from responsive environments to artificial intelligence conversational agents She shows that art and aesthetic experience offer fruitful ways to reflect on the effects of contemporary technological culture enabling encounters that shift our perspectives on the boundaries of the self and challenge the very capacity to feel human
