Please bring your textbook to this laboratory session.

## A. Objectives

Become familiar with

1. Probability calculations
2. Solving genetics problems

## B. Before lab

3. Read *Probability is used to predict inheritance and Mendel's laws can be observed in human pedigrees* on pages 150-151 of your textbook. Also, review linked genes and the construction of genetic maps on pages 156-158.
4. In your notebook, answer questions 1-3, 11, and 21 - 23 in part E below.

## C. During lab

In groups of four, work through the genetics problems. You can fill your answers directly into the worksheet. However, remember to include this exercise in the table of content of your lab notebook, glue the pages in and have them signed by your instructor.

## D. After lab

1. Finish the worksheet if you have not done it in lab.
2. Practice solving genetics problems (e.g.,

## E. Predicting the outcome of various crosses

1. A female carrier of Tay-Sachs wants to have a child with a male carrier for Tay-Sachs. Tay-Sachs is inherited in an autosomal recessive manner. Using the letters "T" and "t" fill out the following table.

|                        | Female | Male |
|------------------------|--------|------|
| Genotype               |        |      |
| Phenotype              |        |      |
| Genotypes of sperm/ova |        |      |

2. Determine the probability of them having a child with Tay-Sachs using a Punnett square (page 147 in Hillis).

## **Enrichment Activity Genetics Problem Solving Chapter 27:**

**Techniques in Somatic Cell Genetics** Jerry W. Shay, 2013-11-21 Somatic cell genetics is an exciting and rapidly expanding field of research. Since descriptions of the major experimental techniques in the field are scattered throughout various journals and other publications, there is a real need for a single reference source for both established investigators and students in the field. In addition, technical reports are frequently abridged such that many researchers are discouraged from attempting to adopt the appropriate methodology. This book therefore describes in detail the many recent technical advances in such areas of somatic cell genetics as transfer mediated by liposomes, erythrocyte ghosts, chromosomes, microcells, mitochondria, and isolated nuclear DNA. These techniques have increased our understanding of the organization and regulation of eukaryotic cells. The production of antibiotic resistant cell lines and their use in studying cytoplasmic inheritance are also included. Evidence for the cytoplasmic regulation of nuclear gene expression in eukaryotic cells is rapidly accumulating following the characterization of cytoplasmic mutations. The production of nuclear coded mutations, their use in standard cell hybridization, and recent advances in techniques for fusing whole cells or cell components are also described.

**Plant Breeding and Cultivar Development** D. P. Singh, A. K. Singh, A. Singh, 2021-01-21 Plant Breeding and Cultivar Development features an optimal balance between classical and modern tools and techniques related to plant breeding. Written for a global audience and based on the extensive international experience of the authors, the book features pertinent examples from major and minor world crops. Advanced data analytics, machine learning, phenomics, and artificial intelligence are explored in the book's 28 chapters that cover classical and modern plant breeding. By presenting these advancements in specific detail, private and public sector breeding programs will learn about new effective and efficient implementation. The insights are clear enough that non-plant breeding majoring students will find it useful to learn about the subject while advanced level students and researchers and practitioners will find practical examples that help them implement their work. Bridges the gap between conventional breeding practices and state-of-the-art technologies. Provides real world case studies of a wide range of plant breeding techniques and practices. Combines insights from genetics, genomics, breeding science, statistics, computer science, and engineering for crop improvement and cultivar development. *Prentice Hall Science*

In this book, Rose Scofield examines behavioural issues using the latest academic research.
