Scholes,2016-11-25 Biodiversity observation systems are almost everywhere inadequate to meet local national and international treaty obligations As a result of alarmingly rapid declines in biodiversity in the modern era there is a strong worldwide desire to upgrade our monitoring systems but little clarity on what is actually needed and how it can be assembled from the elements which are already present This book intends to provide practical guidance to broadly defined biodiversity observation networks at all scales but predominantly the national scale and higher This is a practical how to book with substantial policy relevance It will mostly be used by technical specialists with a responsibility for biodiversity monitoring to establish and refine their systems It is written at a technical level but one that is not discipline bound it should be intelligible to anyone in the broad field with a tertiary education *Explanation and Integration in Mind and Brain Science* David Michael Kaplan,2017 Is the relationship between psychology and neuroscience one of autonomy or mutual constraint and integration This volume includes new papers from leading philosophers seeking to address this issue by deepening our understanding of the similarities and differences between the explanatory patterns employed across these domains **Conversation Analysis and Language Alternation** Anna Filipi,Numa Markee,2018-10-15 This volume brings together researchers in conversation analysis who examine the practice of alternating between English and German Italian Spanish Swedish and Vietnamese in the classroom The collection shows that language alternation is integral to being and

learning to become a bilingual and that being and learning to become a bilingual are accomplished through a remarkably common set of interactional objects and actions whose sequential organisations are quite similar across languages and educational sectors This volume therefore shows that having recourse to more than one shared language provides an important resource for getting the work of language learning and teaching done through an orderliness that can be described and evaluated The findings and the suggested pedagogical applications described in the volume will be of significant interest to researchers and teachers in a range of fields including second and foreign language teaching and learning conversation analysis teacher education and bilingualism

What levels of explanation in the behavioural sciences? Giuseppe Boccignone, Roberto Cordeschi, 2015-07-03 Complex systems are to be seen as typically having multiple levels of organization For instance in the behavioural and cognitive sciences there has been a long lasting trend promoted by the seminal work of David Marr putting focus on three distinct levels of analysis the computational level accounting for the What and Why issues the algorithmic and the implementational levels specifying the How problem However the tremendous developments in neuroscience knowledge about processes at different scales of organization together with the complexity of today cognitive theories suggest that there will hardly be only three levels of explanation Instead there will be many different degrees of commitments corresponding to the different granularities from high level behavioural models to low level neural and molecular models of the cognitive research program For instance Bayesian approaches that are usually advocated for formalizing Marr's computational level and rational behaviour have even been adopted to model synaptic plasticity and axon guidance by molecular gradients As a result we can consider the behavioural scientist as dealing with models at a multiplicity of levels The purpose of this Research Topic in Frontiers in Theoretical and Philosophical Psychology is to promote an approach to the role of the levels and explanation and models which is of interest for cognitive scientists neuroscientists psychologists behavioural scientists and philosophers of science

in Aging Interventions: 2022 Morten Scheibye-Knudsen,2025-03-13 We are now in the third decade of the 21st Century and especially in the last years the achievements made by scientists have been exceptional leading to major advancements in the fast growing field of Aging Interventions Frontiers has organized a series of Research Topics to highlight the latest advancements in science in order to be at the forefront of science in different fields of research This editorial initiative of

particular relevance led by Dr Scheibye Knudsen Specialty Chief Editor of the Interventions in Aging section is focused on new insights novel developments current challenges latest discoveries recent advances and future perspectives in the field of Aging Interventions The Research Topic solicits brief forward looking contributions from Editorial Board members that describe the state of the art outlining recent developments and major accomplishments that have been achieved and that need to occur to move the field forward Authors are encouraged to identify the greatest challenges in the sub disciplines and how to address those challenges

Quantitative Assessment and Validation of Network Inference Methods in Bioinformatics Benjamin Haihe-Kains, Frank Emmert-Streib, 2015-04-14 Scientists today have access to an unprecedented arsenal of high tech tools that can be used to thoroughly characterize biological systems of interest High throughput omics technologies enable to generate enormous quantities of data at the DNA RNA epigenetic and proteomic levels One of the major challenges of the post genomic era is to extract functional information by integrating such heterogeneous high throughput genomic data This is not a trivial task as we are increasingly coming to understand that it is not individual genes but rather biological pathways and networks that drive an organism s response to environmental factors and the development of its particular phenotype In order to fully understand the way in which these networks interact or fail to do so in specific states disease for instance we must learn both the structure of the underlying networks and the rules that govern their behavior In recent years there has been an increasing interest in methods that aim to infer biological networks These methods enable the opportunity for better understanding the interactions between genomic features and the overall structure and behavior of the underlying networks So far such network models have been mainly used to identify and validate new interactions between genes of interest But ultimately one could use these networks to predict large scale effects of perturbations such as treatment by multiple targeted drugs However currently we are still at an early stage of comprehending methods and approaches providing a robust statistical framework to quantitatively assess the quality of network inference and its predictive potential The scope of this Research Topic in Bioinformatics and Computational Biology aims at addressing these issues by investigating the various complementary approaches to quantify the quality of network models These validation techniques could focus on assessing quality of specific interactions global and local structures and predictive ability of network models These methods could rely exclusively on in silico evaluation procedures or they could be coupled with novel experimental designs to generate the biological data necessary to properly validate inferred networks

Recent Advancement in Geoinformatics and Data Science Xiaogang Ma, Matty Mookerjee, Leslie Hsu, Denise Hills, 2023-04-11 The chapters in this Special Paper present the latest progress and discoveries in both the methodology and technology of geoinformatics The methodologies technologies and best practices will make this volume a useful reference with long term impacts for data intensive geoscience in the next decade and beyond

The Routledge Handbook of English Language and Digital Humanities Svenja Adolphs, Dawn Knight, 2020-04-16 The Routledge Handbook of English

Language and Digital Humanities serves as a reference point for key developments related to the ways in which the digital turn has shaped the study of the English language and of how the resulting methodological approaches have permeated other disciplines. It draws on modern linguistics and discourse analysis for its analytical methods and applies these approaches to the exploration and theorisation of issues within the humanities. Divided into three sections, this handbook covers sources and corpora, analytical approaches, English language at the interface with other areas of research in the digital humanities. In covering these areas, more traditional approaches and methodologies in the humanities are recast and research challenges are re-framed through the lens of the digital. The essays in this volume highlight the opportunities for new questions to be asked and long-standing questions to be reconsidered when drawing on the digital in humanities research. This is a ground-breaking collection of essays offering incisive and essential reading for anyone with an interest in the English language and digital humanities.

The long and short of mental time travel-- self-projection over time-scales large and small

James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02. Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days, months, years, and beyond. This Research Topic supposes that, broadly speaking, the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales. Dealing with conceptual time, mental time travel, also called mental simulation, self-projection, episodic semantic memory, prospection, foresight, allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge. Moreover, contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors. But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so-called present moment of perception-action cycle time? This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa, no less progress and integrative synthesis within and across scientific domains might be facilitated. Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus-like feedforward-feedback system for goal pursuit. As an example, it is notable that the duality of prospection and semantic episodic memory operating at conceptual time scales has an analogue in perception-action cycle time, namely the interplay of anticipatory attention and working memory. Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal: Original Research, Methods, Hypothesis, Theory, Reviews, etc., which might speak to questions about time and temporal phenomena at long and/or short time scales.

Shaping EU Law the British Way Graham Butler, Adam Lazowski, 2022-11-17. In this book, leading scholars of EU law, judges and practitioners unpack the judicial reasoning offered by the UK Advocates General in over forty

cases at the Court of Justice which have influenced the shape of EU law The authors place the Opinions in the wider context of the EU legal order and mix praise with critique in order to determine the true contribution of the UK Advocates General before hearing the concluding reflections by the UK Advocates General themselves The role of Advocates General at the Court of Justice of the European Union remains notoriously under researched With a few notable exceptions not much ink has been spilled on analysing their contribution to the judicial discourse that emerges from the Court s Palais in Luxembourg More generally their impact on the shaping of EU law is only sporadically explored This book fills the lacunae by offering an in depth analysis of the way in which the UK Advocates General contributed to development of EU law during 47 years of the UK s membership of the EU During their terms of office Advocates General Jean Pierre Warner 1973 1981 Gordon Slynn 1981 1988 Francis Jacobs 1988 2006 and Eleanor Sharpston 2006 2020 delivered over 1400 Opinions This staggering contribution of the four individuals and their cabinets of legal secretaries was supplemented by an Opinion of a then Judge of the Court of First Instance David Edward who was called to act as an Advocate General in two joined cases in what is now the General Court With the last UK Advocate General departing from the Court of Justice in September 2020 an important era has ended With this watershed moment it is apt to take a look back and critically analyse the contribution to development of EU law made by the UK Advocates General and to elucidate the lasting impact they have had on the nature of EU law
