**Passibility** Wolff-Michael Roth,2011-08-05 This book argues that the constructivist metaphor has become a self appointed overriding concept that suppresses other modes of thinking about knowing and learning science Yet there are questions about knowledge that constructivism cannot properly answer such as how a cognitive structure can intentionally develop a formation that is more complex than itself how a learner can aim at a learning objective that is by definition itself unknown how we learn through pain suffering love or passion and the role emotion and crises play in knowing and learning In support of the hypothesis that passibility underlies cognition readers are provided with a collation of empirical studies and phenomenological analyses of knowing and learning science in schools scientific laboratories and everyday life all of which defy a constructivist explanation The author argues that passibility constitutes an essential factor in the development of consciousness with a range of essential experiences that cannot be brought into the linguistic realm His exploration is guided by concepts such as otherness passion passivity and undecidability and concludes by resituating the construction metaphor to accord it its proper place in a more comprehensive theory of learning
