3.5 Elimination Method – Solving Systems of Equations   Solutions   **Practice**

Algebra 1

Which method would be best for solving this system, Substitution or Elimination? Circle the part of the system that justifies your answer.

1. $3x + 9y = 9$
   $x + 3y = 3$

   Substitution

2. $-3x - 4y = 5$
   $3x + 2y = -8$

   Elimination

3. $4x - 3y = -14$
   $6x + 3y = -9$

   Elimination

4. $2x + 3y = 6$
   $x - 3y = 12$

   Substitution

5. $3x = y$
   $4x - 2y = 2$

   Substitution

6. $3x - 13y = -11$
   $5x - y = 5$

   Substitution

7. $8x - 2y = 12$
   $-4x - 5y = 8$

   Elimination

8. $3x + 4y = 10$
   $5x - 4y = 8$

   Elimination

Solve each system of equations using ELIMINATION.

9. $3x - 4y = -2$
   $2 \cdot [4x + 2y] = (-10) \cdot 2$

   $3x - 4y = -2$
   $+\ 8x + 4y = -20$
   $\overline{\qquad 11x = -22}$

   $\boxed{x = -2}$

   $4(-2) + 2y = -10$
   $-8 + 2y = -10$
   $2y = 2$

   $\boxed{y = -1}$

10. $-8x - 5y = -9$
    $+\quad 8x - 4y = 36$
    $\overline{\qquad}$

    $-9y = 27$
    $\boxed{y = -3}$

    $2x - (-3) = 9$
    $2x + 3 = 9$
    $2x = 6$
    $\boxed{x = 3}$

11. $-7 \cdot (3y - 3)$
    $7x + $

    $7x - 2$
    $+\ -7x + 4$
    $\overline{\qquad -1}$

    $3(-1) -$
    $-3 -$
    $-$

12. $2x + 6y = 14$
    $-2 \cdot (x + 3y) = 7 \cdot -2$

    $2x + 6y = 14$
    $+\ -2x - 6y = -14$
    $\overline{\qquad 0 = 0}$

    $\boxed{\text{Infinite Solutions}}$

13. $2x + 6y = -2$
    $3 \cdot (x - 2y) = 5 \cdot 3$

    $2x + 6y = -2$
    $+\ 3x - 6y = 15$
    $\overline{\quad 5x \qquad = 13}$

    $\boxed{x = 13/5}$

    $\frac{13}{5} \cdot 2 - 2y = \frac{26}{5}$
    $(-\frac{1}{2}) \ -2y = \frac{12}{5} \cdot (-\frac{1}{2})$
    $\boxed{y = -6/5}$

14. $2 \cdot (4x - 3y) = -2 \cdot 2$
    $-8x + 6y = -8$

    $8x - 6y = -4$
    $+\ -8x + 6y = -8$
    $\overline{\qquad 0 = -12}$

    $\boxed{\text{No Solution}}$

Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fme subdivi sion has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science en gineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques **Title Announcement Bulletin** ,1956 **Ordered Algebraic Structures** W.C. Holland,Jorge Martínez,2012-12-06 The conference on Ordered Algebraic Structures held in Curat ao from the 26th of June through the 30th of June 1995 at the Avila Beach Hotel marked the eighth year of ac tivities by the Caribbean Mathematics Foundation abbr CMF which was the principal sponsor of this conference CMF was inaugurated in 1988 with a conference on Ordered Algebraic Structures During the years between these two conferences the field has changed sufficiently both from my point of view and I believe that of my co organizer W Charles Holland to make one wonder about the label Ordered Algebraic Structures itself We recognized this from the start and right away this conference carried a subtitle or if one prefers an agenda we concentrated on the one hand on traditional themes in the theory of ordered groups including model theoretic aspects and on the other hand on matters in which topology more precisely C X style topology and category theory would play a prominent role Plainly ordered algebra has many faces and it is becoming increas ingly difficult to organize an intimate conference such as the ones encouraged in the series sponsored by CMF in this area on a broad set of themes These proceedings reflect accurately we think the spirit of the conferees but it is not a faithful record of the papers presented at the conference *Sparse Optimization Theory and Methods* Yun-Bin Zhao,2018-07-04 Seeking sparse solutions of underdetermined linear systems is required in many areas of engineering and science such as signal and image processing The efficient sparse representation becomes central in various big or high dimensional data processing yielding fruitful theoretical and realistic results in these fields The mathematical optimization plays a fundamentally important role in the development of these results and acts as the mainstream numerical algorithms for the sparsity seeking problems arising from big data processing compressed sensing statistical learning computer vision and so on This has attracted the interest of many researchers at the interface of engineering mathematics and computer science Sparse Optimization Theory and Methods presents the state of the art in theory and algorithms for signal recovery

under the sparsity assumption The up to date uniqueness conditions for the sparsest solution of underdertemined linear systems are described The results for sparse signal recovery under the matrix property called range space property RSP are introduced which is a deep and mild condition for the sparse signal to be recovered by convex optimization methods This framework is generalized to 1 bit compressed sensing leading to a novel sign recovery theory in this area Two efficient sparsity seeking algorithms reweighted l1 minimization in primal space and the algorithm based on complementary slackness property are presented The theoretical efficiency of these algorithms is rigorously analysed in this book Under the RSP assumption the author also provides a novel and unified stability analysis for several popular optimization methods for sparse signal recovery including l1 mininization Dantzig selector and LASSO This book incorporates recent development and the author s latest research in the field that have not appeared in other books   Handbook of International Research in Mathematics Education Lyn D. English,David Kirshner,2010-04-02 The second edition continues the mission of bringing together important new mathematics education research that makes a difference in both theory and practice It updates and extends the Handbook s original key themes and issues for international research in mathematics education for the 21st century namely priorities in international mathematics education research lifelong democratic access to powerful mathematical ideas advances in research methodologies influences of advanced technologies Each of these themes is examined in terms of learners teachers and learning contexts with theory development being an important component of all these aspects This edition also examines other catalysts that have gained increased import in recent years including a stronger focus on the teacher and teacher practice a renewed interest in theory development an increased focus on the mathematics needed in work place settings and a proliferation of research designs and methodologies that have provided unprecedented opportunities for investigating and ultimately improving mathematical teaching and learning This edition includes ten totally new chapters all other chapters are thoroughly revised and updated   *Cohomological Theory of Crystals Over Function Fields* Gebhard Böckle,Richard Pink,2009 This book develops a new cohomological theory for schemes in positive characteristic p and it applies this theory to give a purely algebraic proof of a conjecture of Goss on the rationality of certain L functions arising in the arithmetic of function fields These L functions are power series over a certain ring A associated to any family of Drinfeld A modules or more generally of A motives on a variety of finite type over the finite field $\mathbb{F}_p$ By analogy to the Weil conjecture Goss conjectured that these L functions are in fact rational functions In 1996 Taguchi and Wan gave a first proof of Goss s conjecture by analytic methods a la Dwork The present text introduces A crystals which can be viewed as generalizations of families of A motives and studies their cohomology While A crystals are defined in terms of coherent sheaves together with a Frobenius map in many ways they actually behave like constructible etale sheaves A central result is a Lefschetz trace formula for L functions of A crystals from which the rationality of these L functions is immediate Beyond its application to Goss s L functions the theory of A crystals is closely related to the work of

Emerton and Kisin on unit root F crystals and it is essential in an Eichler Shimura type isomorphism for Drinfeld modular forms as constructed by the first author The book is intended for researchers and advanced graduate students interested in the arithmetic of function fields and or cohomology theories for varieties in positive characteristic It assumes a good working knowledge in algebraic geometry as well as familiarity with homological algebra and derived categories as provided by standard textbooks Beyond that the presentation is largely self contained   The United States Catalog Supplement, January 1918-June 1921 Eleanor E.
