Witches, Scientists,

Philosophers: Essays and Lectures Robert E. Butts,2013-03-09 Robert E Butts 1928 1997 was a philosopher and historian of

science whose central concerns were the distinction between the rational and the irrational He viewed scientific rationality

as our major defence against the various conditions that encourage witch hunts and similar outbursts of irrationality with all

their attendant pain and terror Butts saw himself as a pragmatic realist combining what he took to be the best aspects of

logical empiricism with a historically informed pragmatism deeply appreciative of the methods of science trying to describe a

kind of rationality essential in the struggle to preserve human values This volume gathers previously unpublished essays and

lectures with some previously published thematically related essays It includes essays and lectures on philosophical aspects

of the European witch hunt on scientific rationality and methodology and on the relationships between science and

philosophy exhibited in the writings of such historically significant figures as Leibniz D Alembert Hume Kant Carnap and
