Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be acquired by children and for that matter anyone learning a second language We are not born with an innate ability to read A reading system of mental representations that enables us to read must be formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words with pre existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography Reading on the other hand requires only the recognition of a word for pronunciation Hence spelling is

more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them. The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions. Most children learn to read and spell their language at the same time, thus the co-ordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition. Lack of progress in either reading and/or spelling is also a major issue of concern for parents and teachers, necessitating a cross-disciplinary approach to the problem encompassing major efforts from researchers in neuroscience, cognitive science, experimental psychology, and education. The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues. Contributions from different perspectives are welcomed and could include theoretical, computational, and empirical works that focus on the acquisition of literacy, including cross-orthographic research.

Realising Innovative Partnerships in Educational Research Rachel McNae, Bronwen Cowie, 2017-07-18. *Realising Innovative Partnerships in Educational Research* examines the underlying principles and actions that support the development of and engagement in partnerships in educational research. With social justice at its core, the work in this book represents various architectures of innovation whereby new ways of thinking about partnership research are proposed and practices of teaching and learning are reconciled or not with existing education contexts and practices. With contributions from educational researchers and practitioners from New Zealand and international commentaries provided by established scholars in the field, the book draws together key experiences and insights from students, teachers, community members, and researchers in tertiary, community, school, and early childhood settings. The research in this book seeks to address a gap in our understanding, extending knowledge beyond simply the benefits of partnership work to examine how successful partnerships can be initiated, enacted, and sustained over time. This book invites reflection on the following provocations: Why engage in partnerships for educational research? How has this happened in the past, and what needs to happen for the future? What is unique about the New Zealand context, and what might researchers in other countries learn from our collaborative and culturally responsive research methodologies? What could be some of the underlying principles that support the development of and engagement in collaborative research? How do we evaluate the effectiveness of research partnerships in education to shift the focus to the future?
