

MAKE SENSE OF SHOOTING MODES

The mode you choose affects the amount of control you have over camera settings

Auto mode

If you're a complete novice, this mode is ideal because the camera takes care of all the settings automatically.

Auto Flash Off mode

The same as Auto, but for museums, theatres or indoor sports venues where using a flash might get you thrown out!

Portrait mode

The camera softens skin tones and uses a wide aperture to throw the background out of focus.

Landscape mode

Designed for vivid landscape shots taken in daylight. The built-in flash is switched off and you might need a tripod in poor light.

Child mode

In this mode, the camera makes backgrounds and clothing colourful but keeps skin tones soft and natural looking.

Sports mode

The flash is switched off and the camera uses faster shutter speeds to help freeze fast-moving subjects.

Close-up mode

This favours a smaller aperture to improve depth of field. Consider using a tripod when there's a risk of camera-shake.

Night Portrait mode

The flash fires to light your subject, but the camera uses a slower shutter speed to capture the background lighting too.

Manual mode

This is designed for experts. You choose the shutter speed and aperture yourself, though the camera still suggests settings.

Aperture Priority

Use this if you want to choose the aperture yourself. The camera will set the shutter speed automatically for correct exposure.

Shutter Priority

Use this if you want to choose the shutter speed yourself. The camera will set the aperture automatically so that the exposure is correct.

Program AE mode

Ideal for general use, or when there's little time to think. The camera sets the shutter speed and aperture but you get to control other settings.

GUIDE

A special feature on the D3100 that shows you what to do as you're taking pictures. It's a great way for beginners to learn about photography.

Canon

Full Auto

The idiot 'green square' mode – sets all the camera settings for you automatically.

Creative Auto

Only found on most recent EOS SLRs. Lets you tweak aperture and exposure compensation in a jargon-free way.

Metered manual

You set both aperture and shutter speed, but the camera still gives a meter reading (see p97).

Aperture priority

You set the aperture, and the camera then sets the shutter speed for you.

Shutter priority (time value)

You set the shutter speed, and the camera then sets the aperture for you.

Program shift

The camera pairs aperture and shutter speed, but you can tweak them – see below.

Movie mode

Only found on the mode dial of some newer EOS models that feature HD video recording.

Portrait mode

Sets a wide aperture to blur backgrounds, but overrides other settings, see p96.

Landscape mode

Sets aperture to maximise depth of field, but overrides other settings, see p96.

Close-up mode

Sets a wide aperture to blur backgrounds, but overrides other settings, see p96.

Sports mode

Sets a fast shutter speed to freeze action, but controls other settings too, see p96.

Night portrait mode

Combines flash with a slow shutter speed, but fixes other settings, see p96.

Flash off mode

Fully automatic mode that ensures flash does not fire – see full details on p96.

Automatic depth of field

Tweaks aperture and focus to ensure key parts of picture are sharp. See p96.
