**Handbook of Road Ecology** Rodney van der Ree, Daniel J. Smith, Clara Grilo, 2015-04-02 Winner of the IENE Project Award 2016 This authoritative volume brings together some of the world's leading researchers, academics, practitioners, and transportation agency personnel to present the current status of the ecological sustainability of the linear infrastructure, primarily road, rail, and utility easements that dissect and fragment landscapes globally. It outlines the potential impacts, demonstrates how this infrastructure is being improved, and how broad ecological principles are applied to mitigate the impact of road networks on wildlife. Research and monitoring is an important aspect of road ecology encompassing all phases of a transportation project. This book covers research and monitoring to span the entire project continuum, starting with planning and design through construction and into maintenance and management. It focuses on impacts and solutions for species groups and specific regions with particular emphasis on the unique challenges facing Asia, South America, and Africa. Other key features: Contributions from authors originating from over 25 countries including from all continents. Each chapter summarizes important lessons and includes lists of further reading and thoroughly up-to-date references. Highlights principles that address key points relevant to all phases in all road projects. Explains best practices based on a number of successful international case studies. Chapters are stand-alone but they also build upon and complement each other. Extensive cross-referencing directs the reader to relevant material elsewhere in the book. *Handbook of Road Ecology* offers a comprehensive summary of approximately 30 years of global efforts to quantify the impacts of roads and traffic and implement effective mitigation. As such, it is essential reading for those involved in the planning, design, assessment, and construction of new roads, the management and maintenance of existing roads, and the modifying or retrofitting of existing roads and problem locations. This handbook is an accessible resource for both developed and developing countries, including government transportation agencies, government environmental conservation agencies, NGOs, and road funding and donor organisations.

You are trapped in the dark under a great weight. You cannot move. His, her, their, our, your, and my consciousnesses take shape through speculation into your condition. Are you buried alive? Why? Are you alive? Are you accelerating through space in a you-shaped windowless vessel? What is your shape? Are you a flicker of light on the horizon of a black hole? Where is she? Has he lost all he loved? Speculation via thought becomes reality. Including historical, scientific, and found materials and images. ARTIFACT COLLECTIVE is a fictional and non-fictional exploration of quantum theory, cosmology, possible futures, intellectual property, interwoven, presents the commons, the individual, and collective mind, and the self. Ulijaszek,Cristian Capelli,2015-03-05 The Human Sciences address problems in nature and society that often require coordinated approaches of several scientific disciplines and scholarly research embracing the social and biological sciences and history When we wish for example to understand how some sub populations and not others come to be vulnerable why a disease spreads in one part of a population and not another or which gene variants are transmitted across generations then a remarkable range of disciplinary perspectives need to be brought together from the study of institutional structures cultural boundaries and social networks down to the micro biology of cellular pathways and gene expression The need to explain and address differential impacts of pressing contemporary issues like AIDS ageing social and economic inequalities and environmental change are well known cases in point Population concepts models and evidence lie at the core of approaches to all of these problems if only because accurate differentiation and identification of groups their structures constituents and relations between sub populations are necessary to specify their nature and extent The study of population thus draws both on statistical methodologies of demography and population genetics and sustained observation of the ways in which populations and sub populations are formed maintained or broken up in nature in the laboratory and in society In an era in which research needs to operate on multiple levels population thinking thus provides a common ground for communication and critical thought across disciplines Population in the Human Sciences addresses the need for review and assessment of the framework of interdisciplinary population studies Limitations to prevailing postwar paradigms like the Evolutionary Synthesis and Demographic Transition were becoming evident by the 1970s Subsequent decades have witnessed an immense expansion of population modelling and related empirical inquiry with new genetic developments that have reshaped evolutionary population and developmental biology The rise of anthropological and historical demography and social network analysis are playing major roles in rethinking modern and earlier population history More recently the emergence of sub disciplines like biodemography and evolutionary anthropology and growing links between evolutionary and developmental biology indicate a growing convergence of biological and social approaches to population *Human Evolutionary Biology* Michael P.
