

CHAPTER 2

2.1) ENTROPY AND TEMPERATURE

- (a) $\sigma = \log g = \log C + (3N/2)\log U$.
 $(\partial\sigma/\partial U)_N = 1/\tau = (3N/2)(1/U)$, hence $U = 3N\tau/2$.
- (b) $(\partial^2\sigma/\partial U^2)_N = (3N/2)(-1/U^2) < 0$.

2.2) PARAMAGNETISM

States with spin excess $2s$ have the energy $U = -2smB$, hence $s = -U/2mB$. Insertion into (40) yields (41). From (41) obtain $(\partial\sigma/\partial U)_{N,B} = 1/\tau = -U/m^2B^2N$. Solve for U : $U = \langle U \rangle = -m^2B^2N/\tau = -MB$. Hence $M/Nm = mB/\tau$.

2.3) QUANTUM HARMONIC OSCILLATOR

- (a) From (1.55):

$$\begin{aligned}\sigma &= \log g = \log(N+n-1)! - \log n! - \log(N-1)! \\ &\approx \log(N+n)! - \log n! - \log N!\end{aligned}$$

Replacing $N-1$ by N is equivalent to neglecting a term $-\log[(N+n)/N]$, which for large N is small compared to the factorial terms. With the Stirling approximation:

$$\begin{aligned}\sigma &\approx (N+n) \log(N+n) - n \log n - N \log N \\ &= (N+n) \log[(N+n)/N] - n \log(n/N) \\ &= N[(1+n/N) \log(1+n/N) - (n/N) \log(n/N)].\end{aligned}$$

- (b) Set $n = U/k\omega$ and $Nk\omega = U_0(N)$:

$$\sigma(U, N) = N[(1+U/U_0) \log(1+U/U_0) - (U/U_0) \log(U/U_0)].$$

Problems - Private Solutions? Simon Raiser, 2017-11-30 Cities and city regions are undergoing rapid transformation. They are prime locations of innovation while at the same time facing growing problems of spatial fragmentation and social exclusion. By addressing these problems, cities become forerunners for new patterns of governance which include increasingly private actors. While research on global cities has focused primarily on the world's leading financial and economic centres, comparative research on the changing role of large complex cities in the developing world is less advanced. But it is here where public problems are most seriously threatening the cohesion of urban society and where the need for new answers is most urgent. Illustrated by in-depth examinations of four city regions: Shanghai, Mumbai, Johannesburg and São Paulo, this book readdresses this balance. The book revisits the same set of cities from different angles, thereby reflecting urban contradictions, juxtapositions and disjunctures.

The Physics of Solids Eleftherios N. Economou, 2010-08-04 Solid State Physics emphasizes a few fundamental principles and extracts from them a wealth of information. This approach also unifies an enormous and diverse subject which seems to consist of too many disjoint pieces. The book starts with the absolutely minimum of formal tools, emphasizes the basic principles and employs physical reasoning, a little thinking and imagination to quote R. Feynman to obtain results. Continuous comparison with experimental data leads naturally to a gradual refinement of the concepts and to more sophisticated methods. After the initial overview with an emphasis on the physical concepts and the derivation of results by dimensional analysis, *The Physics of Solids* deals with the Jellium Model (JM) and the Linear Combination of Atomic Orbitals (LCAO) approaches to solids and introduces the basic concepts and information regarding metals and semiconductors.

Announcer American Association of Physics Teachers, 2001 Elementary Statistical Physics Charles Kittel, 2004-03-01 Geared toward graduate students in physics, this text covers such important topics as the properties of the Fermi-Dirac and Bose-Einstein distributions, the interrelated subjects of fluctuations, thermal noise and Brownian movement, and the thermodynamics of irreversible processes. Most sections include illustrative problems. 1958 edition.

The Utilization of Bioremediation to Reduce Soil Contamination: Problems and Solutions Václav Sasek, John A. Glaser, P. Baveye, 2012-12-06 Traditional reliance on chemical analysis to understand the direction and extent of treatment in a bioremediation process has been found to be inadequate. Whereas the goal of bioremediation is toxicity reduction, few direct, reliable measures of this process are as yet available. Another area of intense discussion is the assessment of market forces contributing to the acceptability of bioremediation. Finally, another important component is a series of lectures and lively exchanges devoted to practical applications of different bioremediation technologies. The range of subjects covers a wide spectrum encompassing emerging technologies as well as actual full-scale operations. Examples discussed include landfarming, biopiling, composting, phytoremediation and mycoremediation. Each technology is explored for its utility and capability to provide desired treatment goals. Advantages and limitations of each technology are discussed. The concept of natural attenuation is also critically evaluated since in some cases where time to remediation is not a significant

factor it may be an alternative to active bioremediation operations **American Journal of Physics** ,1986 Archival journal targeted toward advanced level physics and physics education with its focus on the teaching and cultural aspects of physics
