Capital Theory and Political Economy Lefteris Tsoulfidis, 2021-05-31 In recent years there have been a number of new developments in what came to be known as the Capital Theory Debates The debates took place mainly during the 1960s as a

result of Piero Sraffa's critique of the neoclassical theory according to which the prices of factors of production directly depend on their relative scarcities Sraffa showed that when income distribution changes there are many complexities developed within the economic system impacting on prices in ways which are not possible to predict These debates were revisited in the 1980s and again more recently along with a parallel literature that has developed among neoclassical economists and has also looked at the impact of shocks on an economy This book summarizes the debates and issues around the theory of capital and brings to the fore the more recent developments It also pinpoints the similarities and differences between the various approaches and critically evaluates them in light of available empirical evidence The focus of the book is on the price trajectories induced by changes in income distribution and the resulting shape of the wage rates of profit curves and frontier These issues are central to areas such as microeconomics international trade growth technological change and macro stability analysis Each chapter starts with the theoretical issues involved followed by their formalization and subsequently with their operationalization More specifically the variables of the classical theory of value and distribution are rigorously defined and quantified using actual input output data from a number of major economies but mainly from the USA over long stretches of time The empirical results are not only consistent with the anticipations of the theory but also further inform and therefore strengthen its predictive content raising new significant questions

Understanding Development Economics Adam Fforde, 2014-01-03 Important parts of development practice especially in key institutions such as the World Bank are dominated by economists In contrast Development Studies is largely based upon multidisciplinary work in which anthropologists human geographers sociologists and others play important roles Hence a tension has arisen between the claims made by Development Economics to be a scientific measurable discipline prone to wide usage of mathematical modelling and the more discursive practice based approach favoured by Development Studies The aim of this book is to show how the two disciplines have interacted as well as how they differ This is crucial in forming an understanding of development work and to thinking about why policy recommendations can often lead to severe and continuing problems in developing countries This book introduces Development Economics to those coming from two different but linked perspectives economists and students of development who are not economists In both explaining and critiquing Development Economics the book is able to suggest the implications of these findings for Development Studies and more broadly for development policy and its outcomes

Theory and Practice of Computation Shin-ya Nishizaki, Masayuki Numao, Jaime Caro, Merlin Teodosia Suarez, 2012-04-27 Computation should be a good blend of theory and practice and researchers in the field should create algorithms to address real world problems putting equal weight on analysis and implementation Experimentation and simulation can be viewed as yielding to refined theories or improved applications The Workshop on Computation Theory and Practice WCTP 2011 was the first workshop organized jointly by the Tokyo Institute of Technology the Institute of Scientific and Industrial Research Osaka University the University of the Philippines Diliman and De La Salle University Manila devoted to theoretical and practical approaches to computation The aim of the workshop was to present the latest developments by theoreticians and practitioners in academe and industry working to address computational problems that can directly impact the way we live in society This book comprises the refereed proceedings of WCTP 2011 held in Quezon City the Philippines in September 2011 The 16 carefully reviewed and revised full papers presented here deal with biologically inspired computational modeling programming language theory advanced studies in networking and empathic computing

Theory of Financial Risk and Derivative Pricing Jean-Philippe Bouchaud, Marc Potters, 2003-12-11 Risk control and derivative pricing have become of major concern to financial institutions and there is a real need for adequate statistical tools to measure and anticipate the amplitude of the potential moves of the financial markets Summarising theoretical developments in the field this 2003 second edition has been substantially expanded Additional chapters now cover stochastic processes Monte Carlo methods Black Scholes theory the theory of the yield curve and Minority Game There are discussions on aspects of data analysis financial products non linear correlations and herding feedback and agent based models This

book has become a classic reference for graduate students and researchers working in econophysics and mathematical finance and for quantitative analysts working on risk management derivative pricing and quantitative trading strategies

Template Matching Techniques in Computer Vision Roberto Brunelli, 2009-04-29 The detection and recognition of objects in images is a key research topic in the computer vision community Within this area face recognition and interpretation has attracted increasing attention owing to the possibility of unveiling human perception mechanisms and for the development of practical biometric systems This book and the accompanying website focus on template matching a subset of object recognition techniques of wide applicability which has proved to be particularly effective for face recognition applications Using examples from face processing tasks throughout the book to illustrate more general object recognition approaches Roberto Brunelli examines the basics of digital image formation highlighting points critical to the task of template matching presents basic and advanced template matching techniques targeting grey level images shapes and point sets discusses recent pattern classification paradigms from a template matching perspective illustrates the development of a real face recognition system explores the use of advanced computer graphics techniques in the development of computer vision algorithms Template Matching Techniques in Computer Vision is primarily aimed at practitioners working on the development of systems for effective object recognition such as biometrics robot navigation multimedia retrieval and landmark detection It is also of interest to graduate students undertaking studies in these areas

Analysis of Neural Data Robert E. Kass, Uri T. Eden, Emery N. Brown, 2014-07-08 Continual improvements in data collection and processing have had

a huge impact on brain research producing data sets that are often large and complicated By emphasizing a few fundamental principles and a handful of ubiquitous techniques *Analysis of Neural Data* provides a unified treatment of analytical methods that have become essential for contemporary researchers Throughout the book ideas are illustrated with more than 100 examples drawn from the literature ranging from electrophysiology to neuroimaging to behavior By demonstrating the commonality among various statistical approaches the authors provide the crucial tools for gaining knowledge from diverse types of data Aimed at experimentalists with only high school level mathematics as well as computationally oriented neuroscientists who have limited familiarity with statistics *Analysis of Neural Data* serves as both a self contained introduction and a reference work

Advanced Data Assimilation for Geosciences Marc Bocquet,Éric Blayo,Emmanuel Cosme,Leticia F. Cugliandolo,2014 Data assimilation aims at determining as accurately as possible the state of a dynamical system by combining heterogeneous sources of information in an optimal way Generally speaking the mathematical methods of data assimilation describe algorithms for forming optimal combinations of observations of a system a numerical model that describes its evolution and appropriate prior information Data assimilation has a long history of application to high dimensional geophysical systems dating back to the 1960s with application to the estimation of initial conditions for weather forecasts It has become a major component of numerical forecasting systems in geophysics and an intensive field of research with numerous additional applications in oceanography atmospheric chemistry and extensions to other geophysical sciences The physical complexity and the high dimensionality of geophysical systems have led the community of geophysics to make significant contributions to the fundamental theory of data assimilation This book gathers notes from lectures and seminars given by internationally recognized scientists during a three week school held in the Les Houches School of physics in 2012 on theoretical and applied data assimilation It is composed of i a series of main lectures presenting the fundamentals of the most commonly used methods and the information theory background required to understand and evaluate the role of observations ii a series of specialized lectures addressing various aspects of data assimilation in detail from the most recent developments of the theory to the specificities of various thematic applications
