*Identity Change and Foreign Policy* Linus Hagstrom,2015-10-05 Identity has become an explicit focus of International Relations theory in the past two to three decades with one case attracting and puzzling many early identity scholars Japan These constructivist scholars typically ascribed Japan a pacifist or antimilitarist identity an identity which they believed was constructed through the adherence to peaceful norms and antimilitarist culture Due to the alleged resilience of such adherences little change in Japan s identity and its international relations was predicted However in recent years Japan s foreign and security policies have begun to change in spite of these seemingly stable norms and culture This book seeks to address these changes through a pioneering engagement with recent developments in identity theory In particular most chapters theorize identity as a product of processes of differentiation Through detailed case analysis they argue that Japan s identity is produced and reproduced but also transformed through the drawing of boundaries between self and other In particular they stress the role of emotions and identity entrepreneurs as catalysts for identity change With the current balance between resilience and change contributors emphasize that more drastic foreign and security policy transformations

might loom just beyond the horizon This book was originally published as a special issue of The Pacific Review

**Unmanned and Autonomous Ships** R. Glenn Wright, 2020-03-11 Unmanned ships and autonomous ships are quickly becoming a reality making shipping safer and more efficient However traditional tasks and functions are becoming blurred as new technology changes how the unique needs of different sectors are met In addition to large vessels dedicated to the transport of goods and cargos across the oceans major efforts are underway towards the automation of small coastal shipping that includes ferries tugboats supply and service vessels and barges Automated vehicles are also replacing conventional ships for inspecting and servicing pipelines drilling platforms wind farms and other offshore installations Automated shipping is explored in terms of economics technology safety and the environment under the broad themes of ship design and engineering command and control navigation communications security regulatory issues and training This includes initiatives for autonomous shipping as well as civilian implications of military ship automation programs This book is primarily for maritime professionals regulatory authorities insurers and environmental groups It also suits undergraduate students involved in deck officer training and graduate students and academics involved in research in ship design operations and management
