

## Cell Size

What determines the size of a cell?

**Why?**

Sometimes bigger is better—tall basketball players, more closet space, and savings accounts may come to mind. What about cells? Does having big cells make an organism bigger or better? Would having larger cells be an advantage to an organism? If so, why do cells divide rather than continue growing? Maybe there is an advantage to being small.

### Model 1 – Investigating Cell Size

1. Are the cells shown in Model 1 plant or animal cells? Explain your answer.  
**ANIMAL – NO CELL WALL, CHLOROPLAST, LARGE CENTRAL VACUOLE**

2. Label Cell B in Model 1 with the following structures.

cell membrane	cytoplasm	nucleus
ribosomes	vacuole	mitochondria

3. Compare the smaller cell in Model 1 to the larger cell in Model 1.

a. Which cell has a larger surface area (more cell membrane surface)?

**CELL B (LARGER CELL) HAS A LARGER SURFACE AREA THAN CELL A.**

b. Which cell has more channels in its cell membrane that can transport molecules (nutrients, oxygen, and waste products) in and out of the cell?

**CELL B (LARGER CELL) HAS MORE CELL MEMBRANE CHANNELS THAN CELL A.**

**Assessing Cellular Microstructure in Biological Tissues using In Vivo Diffusion-Weighted Magnetic Resonance** Julien Valette,Itamar Ronen,Sune Nørhøj Jespersen,2019-05-16 Magnetic resonance imaging MRI and spectroscopy MRS techniques have opened new doors for examining biological tissues in vivo By combining sensitization to diffusion using magnetic field gradients with a variety of imaging and localization schemes diffusion weighted MRI and diffusion weighted MRS allow investigating translational diffusion of endogenous molecules such as water or metabolites in biological tissues most commonly the brain but also other organs such as the prostate The typical voxel resolution of MRI or MRS is in the millimeter to centimeter range much lower than the cellular scale However as molecules are typically diffusing over just a few  $\mu\text{m}$  during the duration of the

measurement the diffusion time and encounter numerous biological membranes at these scales the average cellular microstructure has a critical influence on the measured diffusion signal Hence diffusion weighted MRI and diffusion weighted MRS are sensitive to tissue microstructure at a scale well below the nominal imaging resolution However the connection between diffusion properties and tissue microstructure remains indirect so any attempt to quantify microstructure will rely on modeling The goal of this Research Topic was to gather experts in various acquisition and modeling strategies and show how these approaches despite their own strengths and weaknesses can yield unique information about cellular microstructure and sometimes complement each other Modules McDougal Littell Incorporated,2005 *Brain Injury and Pediatric Cardiac Surgery* Richard Jonas,Jane Newburger,Joseph Volpe,2019-08-16 An estimated 30 000 children are born in the USA with congenital heart disease each year two thirds of which will require corrective surgery Medical advances have formed a trend of operating on newborns rather than waiting until the child is older Ten years ago the mortality for these operations was 60% to 70% That percentage has dropped to 2% This specialized book explores the basic mechanisms of neurologic injury associated with congenital heart surgery while covering the emerging technologies for assessment of neurologic integrity and injury The text also highlights the current and future techniques for reducing and preventing these injuries and reviews the pertinent medicolegal issues Scientific Argumentation in Biology Victor Sampson,Sharon Schleigh,2013 Develop your high school students understanding of argumentation and evidence based reasoning with this comprehensive book Like three guides in one Scientific Argumentation in Biology combines theory practice and biology content Plant-Based Therapeutics, Volume 1 Ivan A.
