The Handbook of Natural Flavonoids Jeffrey B. Harborne, Herbert Baxter, 1999-06-18. Flavonoids are a large and important group of natural products derived from flavone. Some flavonoids are intensely coloured, providing a spectrum of colours from red to blue in flowers, fruit and leaves. Other flavonoids are essentially colourless, producing the whiteness of white flowers. Besides their contribution to plant colour, flavonoids have a variety of other roles in the growth and development of plants. Leaf flavonoids provide protection from the potential damage of UVB radiation. Certain flavanones are formed as antifungal barriers in plant leaves in response to microbial infection and others play an important part in plant reproduction. Flavonoids also exhibit a wide range of biological properties including anti-microbial, insecticidal and oestrogenic activities. Edited by one of the world's acknowledged leading researchers in flavonoid chemistry and biochemistry, this book is the essential guide to the chemical structure and function of all known flavonoids and contains full references, CAS numbers, chemical structures, molecular formulae and several extensive indexes. The Handbook of Natural Flavonoids is the definitive reference to this large and important group of natural products for researchers in pharmaceutical and medicinal chemistry, plant biochemistry and organic chemistry.

Baptisia They found that flavonoid patterns as revealed by two dimensional paper chromatography were valid criteria for the recognition of the Baptisia species and for the documentation of their numerous natural hybrids Later they showed that the flavonoid chemistry could be used for the analysis of gene flow among populations At that time no attempt was made to even partially identify the flavonoids which were detected chromatographically Nevertheless it soon became apparent that the full value of the chemical data for systematic purposes required knowledge of the structures of the flavonoids In 1962 one of us T J M in collaboration with Drs ALSTON and TURNER began the chemical analysis of the more than 60 flavonoids which had been chromatographically detected in the 16 Baptisia species In the intervening years a number of chemists and botanists including Drs K BAETCKE B BREHM M CRANMER D HORNE J KAGAN B KROSCHEWSKY J MCCLURE H R SLER and J WALLACE participated in the development of techniques and procedures for the rapid identification of known flavonoids and in the structure determination of new flavonoids In addition the flavonoid chemistry of many plants other than Baptisia was investigated
