**Urban Disaster Resilience and Security** Alexander  
 Fekete, Frank Fiedrich,2017-12-04 This edited book investigates the interrelations of disaster impacts resilience and security  
 in an urban context Urban as a term captures megacities cities and generally human settlements that are characterised by  
 concentration of quantifiable and non quantifiable subjects objects and value attributions to them The scope is to narrow  
 down resilience from an all encompassing concept to applied ways of scientifically attempting to measure this type of  
 disaster related resilience 28 chapters in this book reflect opportunities and doubts of the disaster risk science community  
 regarding this measurability Therefore examples utilising both quantitative and qualitative approaches are juxtaposed This  
 book concentrates on features that are distinct characteristics of resilience how they can be measured and in what sense  
 they are different to vulnerability and risk parameters Case studies in 11 countries either use a hypothetical pre event  
 estimation of resilience or are addressing a revealed resilience evident and documented after an event Such information can  
 be helpful to identify benchmarks or margins of impact magnitudes and related recovery times volumes and qualities of  
 affected populations and infrastructure
