This dissertation is composed of three essays Essay 1 Does School Start Too Early For Student Learning considers the connection between school start time and student performance Biological evidence indicates that adolescents internal clocks are designed to make them fall asleep and wake up at later times than adults This science has prompted widespread debate about delaying school start times in the U S a country which has some of the earliest start times worldwide The debate suffers however from a glaring absence of evidence the small number of prior studies has been too low powered statistically to test whether later start times improve achievement I fill the gap by studying achievement across a large nationally representative set of high schools that have varying start times I identify the positive effect of later clock start times as well as the independent effect of greater daylight at school start time My primary empirical method is cross sectional regression with rich controls for potentially confounding variables The findings are confirmed by regression discontinuity analysis focused on schools close to time zone boundaries I quantify the net gain in welfare from having an additional hour of sunlight before school starts by comparing the substantial lifetime earnings benefits for students against the likely the societal costs Essay 2 Student Success and Teaching Assistant Effectiveness In Large Classes considers the impact teaching assistants TAs have on student performance In universities TAs play a crucial role by providing small group instruction in lecture courses with large enrollment The multiplicity of TAs creates both positive opportunities and negative incentives On the one hand some TAs may excel at tasks such as helping struggling students at which other TAs fail If so all students may be able to learn better if they can match themselves to the TA that best suits their needs On the other hand the multiplicity of TAs means that students in the same class often receive instruction that varies in quality even though they are ultimately graded on the same standard In this paper we use data from a large lecture course in which students are conditionally randomly assigned to TAs In addition to administrative data on scores and grades we use survey data which we generated on students initial preparation their study habits and their interactions with TAs We identify the existence of variation among TAs in teaching effectiveness We also identify how TAs vary in their effectiveness with certain subpopulations of students the least and best prepared students with different backgrounds and so on Using our parameter estimates we simulate student achievement under scenarios such as random assignment to TAs elimination retraining of the least effective TAs and matching of TAs to students based on initial information to show the potential gains in student welfare from more efficient matching Essay 3 A Study of Student Majors A Historical Perspective considers whether differing financial returns across degrees are a significant factor in a student s choice of a major During the late 1990s the U S experienced a technology boom

that significantly increased the initial salary offers to engineering students and computer science students in particular. These dramatic increases in returns provide an excellent opportunity to examine not only how students respond to salary levels but also to salary trends. The existing literature has focused on the extent to which differing financial returns can affect a student's choice of undergraduate major. This paper extends the analysis to test if trends in salary levels also affect the share of students selecting into various majors using a comprehensive dataset of all post secondary institutions. I find that students select into majors that offer higher salaries and have greater wage growth. Using a flexible empirical model that allows students to respond to both changes in salary levels and growth, I find that the results hold across majors and within engineering disciplines. These results help to explain why, for instance, the percentage of students choosing to major in computer science grew more rapidly than could be explained by salary level alone. Measuring History S. G.

Grant, 2009-03-01. Measuring History complements the cases presented in Wise Social Studies Practices. Yeager Davis 2005. Yeager and Davis highlight the rich and ambitious teaching that can occur in the broad context of state level testing. In this book, the chapter authors and I bring the particular state history tests more to the fore and examine how teachers are responding to them. At the heart of Measuring History are cases of classroom teachers in seven states: Florida, Kentucky, Michigan, New York, Texas, Mississippi, and Virginia, where new social studies standards and new and generally high stakes state level history tests are prominent. In these chapters, the authors describe and analyze the state's testing efforts and how those efforts are being interpreted in the context of classroom practice. The results both support and challenge prevailing views on the efficacy of testing as a vehicle for educational reform. Catherine Horn, University of Houston, and I lay the groundwork for the case studies through a set of introductory chapters that examine the current environment, the research literature, and the technical qualities of history tests. Wordsearches Adrian Wallwork, 2017-12-12. On the train, on the beach, on the sofa, many people in all parts of the world enjoy doing wordsearches. If you are studying English and want to learn and practise vocabulary related to various topics, then this book is for you. The topics reflect the kinds of everyday conversations that you might have both with native and non-native speakers of English. The topics are also those that are typically tested in English examinations, e.g. TOEFL, Cambridge First Certificate, Advanced IELTS, and Trinity. Each chapter begins with a list of questions to enable you to have a conversation about a particular topic in various situations, on a social occasion, e.g. a work dinner, a conference lunch, a party in the classroom, during an English lesson, when chatting either face to face or online, and during an English oral exam. After the list of questions, you will find a Word List associated with the topic and exercises to test your knowledge of less common words. The final aim is then to find the words from the Word List in the related Wordsearch. Easy English is a series of books to help you learn and revise your English with minimal effort. You can improve your English by reading texts in English that you might normally read in your own language, e.g. jokes, personality tests, lateral thinking games, and wordsearches, doing short exercises to improve specific areas, grammar and vocabulary, i.e.

the areas that tend to lead to the most mistakes the aim is just to focus on what you really need rather than overwhelming yourself with a mass of rules many of which may have no practical daily value Other books in the Easy English series include Wordsearches Widen Your Vocabulary in English Test Your Personality Have Fun and Learn Useful Phrases Word games Riddles and Logic Tests Tax Your Brain and Boost Your English Top 50 Grammar Mistakes How to Avoid Them Top 50 Vocabulary Mistakes How to Avoid Them

Teaching History with Big Ideas S. G. Grant,Jill M. Gradwell,2010-07-16 In the case studies that make up the bulk of this book middle and high school history teachers describe the decisions and plans and the problems and possibilities they encountered as they ratcheted up their instruction through the use of big ideas Framing a teaching unit around a question such as Why don t we know anything about Africa offers both teacher and students opportunities to explore historical actors ideas and events in ways both rich and engaging Such an approach exemplifies the construct of ambitious teaching whereby teachers demonstrate their ability to marry their deep knowledge of subject matter students and the school context in ways that fundamentally challenge the claim that history is boring
