Consolidated Guideline on Sexual and Reproductive Health and Rights of Women Living with HIV World Health Organization, 2017-02-20 The starting point for this guideline is the point at which a woman has learnt that she is living with HIV and it therefore covers key issues for providing comprehensive sexual and reproductive health and rights related services and support for women living with HIV As women living with HIV face unique challenges and human rights violations related to their sexuality and reproduction within their families and communities as well as from the health care institutions where they seek care particular emphasis is placed on the creation of an enabling environment to support more effective health interventions and better health outcomes This guideline is meant to help countries to more effectively and efficiently plan develop and monitor programmes and services that promote gender equality and human rights and hence are more acceptable and appropriate for women living with HIV taking into account the national and local epidemiological context It discusses implementation issues that health interventions and service delivery must address to achieve gender equality and support human rights

Clearing the Air Gregory Wood, 2016-10-14 In *Clearing the Air* Gregory Wood examines smoking's importance to the social and cultural history of working people in the twentieth century United States Now that most workplaces in the United States are smoke free it may be difficult to imagine the influence that nicotine addiction once had on the politics of worker resistance workplace management occupational health vice moral reform grassroots activism and the labor movement The experiences social relations demands and disputes that accompanied smoking in the workplace in turn shaped the histories of antismoking politics and tobacco control The steady expansion of cigarette smoking among men women and children during the first half of the twentieth century brought working people into sustained conflict with managers demands for diligent attention to labor processes and work rules

Addiction to nicotine led smokers to resist and challenge policies that coldly stood between them and the cigarettes they craved Wood argues that workers varying abilities to smoke on the job stemmed from the success or failure of sustained opposition to employer policies that restricted or banned smoking During World War II workers in defense industries for example struck against workplace smoking bans By the 1970s opponents of smoking in workplaces began to organize and changing medical knowledge and dwindling union power contributed further to the downfall of workplace smoking The demise of the ability to smoke on the job over the past four decades serves as an important indicator of how the power of workers influence in labor management relations has dwindled over the same period The Breakdown of Higher Education

John M. Ellis, 2020-03-17 A series of near riots on campuses aimed at silencing guest speakers has exposed the fact that our universities are no longer devoted to the free exchange of ideas in pursuit of truth But this hostility to free speech is only a symptom of a deeper problem writes John Ellis Having watched the deterioration of academia up close for the past fifty years Ellis locates the core of the problem in a change in the composition of the faculty during this time from mildly left leaning to almost exclusively leftist He explains how astonishing historical luck led to the success of a plan first devised by a small group of activists to use college campuses to promote radical politics and why laws and regulations designed to prevent the politicizing of higher education proved insufficient Ellis shows that political motivation is always destructive of higher learning Even science and technology departments are not immune The corruption of universities by radical politics also does wider damage to primary and secondary education to race relations to preparation for the workplace and to the political and social fabric of the nation Commonly suggested remedies new free speech rules or enforced right of center appointments will fail because they don't touch the core problem a controlling faculty majority of political activists with no real interest in scholarship This book proposes more drastic and effective reform measures The first step is for Americans to recognize that vast sums of public money intended for education are being diverted to a political agenda and to demand that this fraud be stopped **Selling Hope and College**

Alex Posecznick, 2017-04-25 It has long been assumed that college admission should be a simple matter of sorting students according to merit with the best heading off to the Ivy League and highly ranked liberal arts colleges and the rest falling naturally into their rightful places Admission to selective institutions where extremely fine distinctions are made is characterized by heated public debates about whether standardized exams high school transcripts essays recommendation letters or interviews best indicate which prospective students are worthy And then there is college for everyone else But what goes into less selective college admissions in an era when everyone feels compelled to go regardless of preparation or life goals Ravenwood College where Alex Posecznick spent a year doing ethnographic research was a small private nonprofit institution dedicated to social justice and serving traditionally underprepared students from underrepresented minority groups To survive in the higher education marketplace the college had to operate like a business and negotiate complex categories of merit while painting a hopeful picture of the future for its applicants Selling

Hope and College is a snapshot of a particular type of institution as it goes about the business of producing itself and justifying its place in the market Admissions staff members were burdened by low enrollments and worked tirelessly to fill empty seats even as they held on to the institution's special spirit Posecznick documents what it takes to keep a mediocre institution open and running and the struggles tensions and battles that members of the community tangle with daily as they carefully walk the line between empowering marginalized students and exploiting them

Advances in Virtual Agents and Affective Computing for the Understanding and Remediation of Social Cognitive Disorders Eric Brunet-Gouet, Ali Oker, Jean-Claude Martin, Ouriel Grynszpan, Philip L. Jackson, 2016-03-02 Advances in modern sciences occur thanks to within fields discoveries as well as confrontation of concepts and methods from separated sometimes distant domains of knowledge For instance the fields of psychology and psychopathology benefited from accumulated contributions from cognitive neurosciences which in turn received insights from molecular chemistry cellular biology physics neuroimaging statistics and computer sciences data processing etc From the results of these researches one can argue that among the numerous cognitive phenomena supposedly involved in the emergence the human intelligence and organized behavior some of them are specific to the social nature of our phylogenetic order Scientific reductionism allowed to divide the social cognitive system into several components i.e. emotion processing and regulation mental state inference theory of mind agency etc New paradigms were progressively designed to investigate these processes within highly controlled laboratory settings Moreover the related constructs were successful at better understanding psychopathological conditions such as autism and schizophrenia with partial relationships with illness outcomes Here we would like to outline the parallel development of concepts in social neurosciences and in other domains such as computer science affective computing virtual

reality development and even hardware technologies While several researchers in neurosciences pointed out the necessity to consider naturalistic social cognition Zaki and Ochsner *Ann N Y Acad Sci* 1167 16 30 2009 the second person perspective Schilbach et al *Behav Brain Sci* 36 4 393 414 2013 and reciprocity de Bruin et al *Front Hum Neurosci* 6 151 2012 both computer and software developments allowed more and more realistic real time models of our environment and of virtual humans capable of some interaction with users As noted at the very beginning of this editorial a new convergence between scientific disciplines might occur from which it is tricky to predict the outcomes in terms of new concepts methods and uses Although this convergence is motivated by the intuition that it fits well ongoing societal changes increasing social demands on computer technologies augmenting funding it comes with several difficulties for which the current *Frontiers in topic* strives to bring some positive answers and to provide both theoretical arguments and experimental examples The first issue is about concepts and vocabulary as the contributions described in the following are authored by neuroscientists computer scientists psychopathologists etc A special attention was given during the reviewing process to stay as close as possible to the publication standards in psychological and health sciences and to avoid purely technical descriptions The second problem concerns methods more complex computerized interaction models results in unpredictable and poorly controlled experiments In other words the assets of naturalistic paradigms may be alleviated by the difficulty to match results between subjects populations conditions Of course this practical question is extremely important for investigating pathologies that are associated with profoundly divergent behavioral patterns Some of the contributions of this topic provide description of strategies that allowed to solve these difficulties at least partially The last issue is about heterogeneity of the objectives of the researches presented here While selection criteria focused on the use of innovative technologies to assess or improve social cognition the fields of application of this approach were quite unexpected In an attempt to organize the contributions three directions of research can be identified 1 how innovation in methods might improve understanding and assessment of social cognition disorders or pathology 2 within the framework of cognitive behavioral psychotherapies CBT how should we consider the use of virtual reality or augmented reality 3 which are the benefits of these techniques for investigating severe mental disorders schizophrenia or autism and performing cognitive training The first challenging question is insightfully raised in the contribution of Timmermans and Schilbach 2014 giving orientations for investigating alterations of social interaction in psychiatric disorders by the use of dual interactive eye tracking with virtual anthropomorphic avatars Joyal Jacob and collaborators 2014 bring concurrent and construct validities of a newly developed set of virtual faces expressing six fundamental emotions The relevance of virtual reality was exemplified with two contributions focusing on anxiety related phenomena Jackson et al 2015 describe a new environment allowing to investigate empathy for dynamic FACS coded facial expressions including pain Based on a systematic investigation of the impact of social stimuli modalities visual auditory Ruch and collaborators are able to characterize the specificity of the interpretation of laughter in people with gelotophobia 2014

On the issue of social anxiety Aymerich Franch et al 2014 presented two studies in which public speaking anxiety has been correlated with avatars similarity of participants self representations The second issue focuses on how advances in virtual reality may benefit to cognitive and behavioral therapies in psychiatry These interventions share a common framework that articulates thoughts feelings or emotions and behaviors and proposes gradual modification of each of these levels thanks to thought and schema analysis stress reduction procedures etc They were observed to be somehow useful for the treatment of depression stress disorders phobias and are gaining some authority in personality disorders and addictions The main asset of new technologies is the possibility to control the characteristics of symptom eliciting stimuli situations and more precisely the degree to which immersion is enforced For example Baus and Bouchard 2014 provide a review on the extension of virtual reality exposure based therapy toward recently described augmented reality exposure based therapy in individuals with phobias Concerning substance dependence disorders Hone Blanchet et collaborators 2014 present another review on how virtual reality can be an asset for both therapy and craving assessment stressing out the possibilities to simulate social interactions associated with drug seeking behaviors and even peers pressure to consume The last issue this Frontiers topic deals with encompasses the questions raised by social cognitive training or remediation in severe and chronic mental disorders autistic disorders schizophrenia Here therapies are based on drill and practice or strategy shaping procedures and most of the time share an errorless learning of repeated cognitive challenges Computerized methods were early proposed for that they do effortlessly and with limited costs repetitive stimulations While repetition was incompatible with realism in the social cognitive domain recent advances provide both immersion and full control over stimuli Georgescu and al 2014 exhaustively reviews the use of virtual characters to assess and train non verbal communication in high functioning autism HFA Grynszpan and Nadel 2015 present an original eye tracking method to reveal the link between gaze patterns and pragmatic abilities again in HFA About schizophrenia Oker and collaborators 2015 discuss and report some insights on how an affective and reactive virtual agents might be useful to assess and remediate several defects of social cognitive disorders About assessment within virtual avatars on schizophrenia Park et al 2014 focused on effect of perceived intimacy on social decision making with schizophrenia patients Regarding schizophrenia remediation Peyroux and Franck 2014 presented a new method named RC2S which is a cognitive remediation program to improve social cognition in schizophrenia and related disorders To conclude briefly while it is largely acknowledged that social interaction can be studied as a topic of its own all the contributions demonstrate the added value of expressive virtual agents and affective computing techniques for the experimentation It also appears that the use of virtual reality is at the very beginning of a new scientific endeavor in cognitive sciences and medicine
