Rao, E.-C. Hsu, 2008-01-08 The Hilbert Huang Transform HHT is a recently developed technique used to analyze nonstationary data This book uses methods based on the Hilbert Huang Transform to analyze hydrological and environmental time series These results are compared to the results from the traditional methods such as those based on Fourier transform and other classical statistical tests Climate Change 2021 - The Physical Science Basis Intergovernmental Panel on Climate Change (IPCC), 2023-07-26 The Working Group I contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provides a comprehensive assessment of the physical science basis of climate change It considers in situ and remote observations paleoclimate information understanding of climate drivers and physical chemical and biological processes and feedbacks global and regional climate modelling advances in methods of analyses and insights from climate services It assesses the current state of the climate human influence on climate in all regions future climate change including sea level rise global warming effects including extremes climate information for risk assessment and regional adaptation limiting climate change by reaching net zero carbon dioxide emissions and reducing other greenhouse gas emissions and benefits for air quality The report serves policymakers decision makers stakeholders and all interested parties with the latest policy relevant information on climate change Available as Open Access on Cambridge Core Groundwater Recharge from Run-off, Infiltration and Percolation K.-P. Seiler, J.R. Gat, 2007-09-20 Groundwater constitute the most important reservoir of

available clean water Due to its overexploitation some anthropogenic mismanagement on the surface and the overloading of the cleanup potential of subsurface many of the groundwater systems used for water supply are in jeopardy The problem is very severe in dry lands but also in urban industrial agricultural and traffic areas This book first discusses the recharge fluxes relating both to the quantity and quality of groundwater In order to face the threats to the water supply and to be able to maintain a sustainable water management policy detailed knowledge is needed in between others on the surface to subsurface transformation link in the water cycle Secondly the presentation and comparison of both the traditional and modern approach to determine groundwater recharge is discussed The traditional approach to determine groundwater recharge is based on water balance estimates and hydraulic considerations which yield instantaneous values at best but do not integrate the totality of recharge pathways in time and space In contrast environmental tracers do integrate these factors Finally the fate of groundwater recharge in the subsurface by hydraulic and geologic means is discussed in detail in order to stimulate adapted groundwater management strategies and to better assess consequences of climate changes on groundwater resources as a whole Audience This book will be of interest to hydrologists hydro geologists engineers geographers agronomists soil scientists groundwater modellers environmental physicists limnologists

Distributed Hydrologic Modeling Using GIS Baxter E. Vieux,2013-03-14 During

ten years serving with the USDA Soil Conservation Service SCS now known as the Natural Resources Conservation Service NRCS I became amazed at how millions of dollars in contract monies were spent based on simplistic hydrologic models As project engineer in western Kansas I was responsible for building flood control dams authorized under Public Law 566 in the Wet Walnut River watershed This watershed is within the Arkansas Red River basin as is the Illinois River basin referred to extensively in this book After building nearly 18 of these structures I became Assistant State Engineer in Michigan and for a short time State Engineer for NRCS Again we based our entire design and construction program on simplified relationships variously referred to as the SCS method I recall announcing that I was going to pursue a doctoral degree and develop a new hydrologic model One of my agency s chief engineers remarked Oh no not another model Since then I hope that I have not built just another model but have significantly advanced the state of hydrologic modeling for both researchers and practitioners Using distributed hydrologic techniques described in this book I also hope one day to forecast the response of the dams I built
