Encyclopedia of Modern Coral Reefs David Hopley, 2010-11-26 Coral reefs are the largest landforms built by plants and animals. Their study therefore incorporates a wide range of disciplines. This encyclopedia approaches coral reefs from an earth science perspective, concentrating especially on modern reefs. Currently coral reefs are under high stress, most prominently from climate change, with changes to water temperature, sea level, and ocean acidification particularly damaging. Modern reefs have evolved through the massive environmental changes of the Quaternary, with long periods of exposure during glacially lowered sea level periods and short periods of interglacial growth. The entries in this encyclopedia condense the large amount of work carried out since Charles Darwin first attempted to understand reef evolution. Leading authorities from many countries have contributed to the entries, covering areas of geology, geography, and ecology, providing comprehensive access to the most up-to-date research on the structure, form, and processes operating on Quaternary coral reefs.

Strasburger's Plant Sciences Andreas Bresinsky, Christian Körner, Joachim W. Kadereit, Gunther Neuhaus, Uwe Sonnewald, 2013-09-17 Structure, physiology, evolution, systematics, ecology. Pollination Biology Dharam P. Abrol, 2011-10-05 This book has a wider approach, not strictly focused on crop production, compared to other books that are

strictly oriented towards bees but has a generalist approach to pollination biology. It also highlights relationships between introduced and wild pollinators and consequences of such introductions on communities of wild pollinating insects. The chapters on biochemical basis of plant pollination, interaction, pollination energetics, climate change and pollinators, and pollinators as bioindicators of ecosystem functioning provide a base for future insights into pollination biology. The role of honeybees and wild bees on crop pollination, value of bee pollination, planned honeybee pollination, non bee pollinators, safety of pollinators, pollination in cages, pollination for hybrid seed production, the problem of diseases, genetically modified plants and bees, the role of bees in improving food security and livelihoods, capacity building and awareness for pollinators are also discussed.

Marine Hard Bottom Communities Martin Wahl, 2009-06-22 Marine hard bottoms feature some of the most spectacular and diverse biological communities on this planet. These not only contain a rich treasure of genetic, taxonomic and functional information but also deliver irreplaceable ecosystem services. At the same time they are highly vulnerable and increasingly threatened by anthropogenic pressures. This volume has collected contributions by 50 scientists from numerous biogeographic regions dealing with characteristics of hard bottom communities. Distributional patterns in space and time are described, followed by analyses of the intrinsic and extrinsic dynamics producing these patterns. A strong emphasis is placed on the ongoing changes occurring in the structure and diversity of these communities in response to spiralling environmental impacts and on state of the art countermeasures aiming to preserve these ecological treasures. Finally, various values of diversity are assessed, hopefully as an incentive for enhanced conservation efforts.

Ecosystem Services Mark Everard, 2021-12-30 Revised and fully updated, this textbook provides a detailed yet accessible introduction to the key aspects of ecosystem services. Ecosystem services is one of the most powerful guiding principles for ecology, biodiversity conservation and the management of natural resources. It provides the basis of assessing the multiple values and services that ecosystems can provide to humankind, including diverse issues such as carbon sequestration, flood control, crop pollination and aesthetic and cultural services. The second edition of *Ecosystem Services: Key Issues* has been fully revised and updated to address policy and scientific developments as well as new and emerging issues such as nature based solutions, zoonotic diseases and environmental justice. It includes new and updated case studies from across the world and each chapter contains further reading, learning objectives and discussion questions to aid student learning. The book details the historical roots of ecosystem services in the second half of the twentieth century through initiatives such as the Millennium Ecosystem Assessment, The Common International Classification of Ecosystem Services (CICES) and the United Nations Sustainable Development Goals. It shows how ecosystem goods and services can be categorised and valued in economic as well as non-monetary terms while also highlighting some of the difficulties and limitations of valuation techniques. The author describes how themes such as systems thinking, social ecological resilience and natural capital relate to ecosystem services and how these can contribute to more sustainable and equitable development. This book will be essential reading for students and

scholars of ecosystem services ecology environmental science biodiversity conservation environmental economics natural resource management and sustainable development It will also be of use to professionals and policymakers who are looking to integrate ecosystems and their services into their decision making processes

Conservation Paleobiology Gregory P. Dietl, Karl W. Flessa, 2017-11-17 In conservation perhaps no better example exists of the past informing the present than the return of the California condor to the Vermilion Cliffs of Arizona Extinct in the region for nearly one hundred years condors were successfully reintroduced starting in the 1990s in an effort informed by the fossil record condor skeletal remains had been found in the area's late Pleistocene cave deposits The potential benefits of applying such data to conservation initiatives are unquestionably great yet integrating the relevant disciplines has proven challenging Conservation Paleobiology gathers a remarkable array of scientists from Jeremy B C Jackson to Geerat J Vermeij to provide an authoritative overview of how paleobiology can inform both the management of threatened species and larger conservation decisions Studying endangered species is difficult They are by definition rare some exist only in captivity and for those still in their native habitats any experimentation can potentially have a negative effect on survival Moreover a lack of long term data makes it challenging to anticipate biotic responses to environmental conditions that are outside of our immediate experience But in the fossil and pre-fossil records from natural accumulations such as reefs shell beds and caves to human made deposits like kitchen middens and archaeological sites enlightening parallels to the Anthropocene can be found that might serve as a primer for present day predicaments Offering both deep time and near time perspectives and exploring a range of ecological and evolutionary dynamics and taxa from terrestrial as well as aquatic habitats Conservation Paleobiology is a sterling demonstration of how the past can be used to manage for the future giving new hope for the creation and implementation of successful conservation programs

Fossil and Recent Biofilms W.E. Krumbein,D.M. Paterson,G.A. Zavarzin,2013-11-11 MICROBIAL BIOFILMS
PROTECTIVE NICHEs IN ANCIENT AND MODERN GEOMICROBIOLOGY J W Costerton and Paul Stoodley Center for
Biofilm Engineering Montana State University As this book is published based on discussions of a conference that was held in
2001 it may be useful to provide an update on the most recent revelations about biofilms so that this excellent exposition of
the contribution of microbial biofilms to geological processes may be placed in a modern context The importance of the
contribution of microbial biofilms to global processes is only now being appreciated as it is revealed that all terrestrial
surfaces are teeming with microbial life in the form of biofilm communities These communities live on soil particles in rock
fissures marine and river sediments and at the very extremes of terrestrial habitats from inside Antarctic ice to the walls of
deep sea hydrothermal vents The contribution of these biofilm communities generally went unrecognized because it was the
water that was where microbiologists looked for life not the surfaces although evidence of the early association of microbes
with surfaces was in fact present in the fossil record Rasmussen 2000 Reysenbach and Cady 2001 It is also revealing that
biofilm formation is found in prokaryotes from the most deeply rooted branches of the phylogenetic tree in both the Archaea
and Bacteria kingdoms the Korarchaeota and Aquificales respectively Jahnke et al 2001 Reysenbach et al 2000 Routledge

Today the risks associated with global environmental change and the dangers of extreme climatic and geological events
remind us of humanity's dependence on favourable environmental conditions Our relationships with the landscapes and
ecologies that we are a part of the plants and animals that we share them with and the natural resources that we extract lie
at the heart of contemporary social and political debates It is no longer possible to understand key social scientific concerns
without at the same time also understanding contemporary patterns of ecosystem change The Routledge International
Handbook of Social and Environmental Change reviews the major ways in which social scientists are conceptualizing more
integrated perspectives on society and nature from the global to local levels The chapters in this volume by international
experts from a variety of disciplines explore the challenges contradictions and consequences of social ecological change
along with the uncertainties and governance dilemmas they create The contributions are based around the themes of Climate
change energy and adaptation Urban environmental change and governance Risk uncertainty and social learning Re
assembling social ecological systems With case studies from sectors across both developed and developing worlds the
Handbook illustrates the inter connectedness of ecosystem health natural resource condition livelihood security social justice

and development It will be of interest for students and scholars across the social sciences and natural sciences as well as to those interested and engaged in environmental policy at all levels
