Dierstein, Dieter Müller-Wichards, Hans-Martin Wacker, 1988-05-11 It was the aim of the conference to present issues in  
parallel computing to a community of potential engineering scientific users An overview of the state of the art in several  
important research areas is given by leading scientists in their field The classification question is taken up at various points  
ranging from parametric characterizations communication structure and memory distribution to control and execution  
schemes Central issues in multiprocessing hardware and operation such as scalability techniques of overcoming memory  
latency and synchronization overhead as well as fault tolerance of communication networks are discussed The problem of  
designing and debugging parallel programs in a user friendly environment is addressed and a number of program  
transformations for enhancing vectorization and parallelization in a variety of program situations are described Two different  
algorithmic techniques for the solution of certain classes of partial differential equations are discussed The properties of  
domain decomposition algorithms and their mapping onto a CRAY XMP type architecture are investigated and an overview is

given of the merit of various approaches to exploiting the acceleration potential of multigrid methods Finally an abstract performance modeling technique for the behavior of applications on parallel and vector architectures is described
