By studying a human pedigree, you can determine whether a trait is dominant or recessive. To interpret the three pedigrees below, use the same key shown at the right. Of course, the individual with the trait could be homozygous dominant or heterozygous dominant.

A. The pedigree shows the inheritance of attached earlobes for four generations.

Is the trait for attached earlobes, versus free earlobes, dominant or recessive?

\_\_\_\_\_ How do you know? \_\_\_\_\_

B. The pedigree shows the inheritance of tongue rolling.

Is this trait dominant or recessive? \_\_\_\_\_ Explain. \_\_\_\_\_

C. This pedigree shows the inheritance of colorblindness, a sex-linked trait.

Is this trait dominant or recessive? \_\_\_\_\_ Is the mother of the colorblind girl in the  $F_3$  generation colorblind, a carrier, or a person with normal color vision?

Pascual, 2014-10-28 Rosenberg's *Molecular and Genetic Basis of Neurologic and Psychiatric Disease* Fifth Edition provides a comprehensive introduction and reference to the foundations and key practical aspects relevant to the majority of neurologic and psychiatric disease. A favorite of over three generations of students, clinicians, and scholars, this new edition retains and expands the informative, concise, and critical tone of the first edition. This is an essential reference for general medical practitioners, neurologists, psychiatrists, geneticists, and related professionals, and for the neuroscience and neurology research community. The content covers all aspects essential to the practice of neurogenetics to inform clinical diagnosis, treatment, and genetic counseling. Every chapter has been thoroughly revised or newly commissioned to reflect the latest scientific and medical advances by an international team of leading scientists and clinicians. The contents have been expanded to include disorders for which a genetic basis has been recently identified, together with abundant original illustrations that convey and clarify the key points of the text in an attractive didactic format. Previous editions have established this book as the leading tutorial reference on neurogenetics. Researchers will find great value in the coverage of genomics, animal models, and diagnostic methods, along with a better understanding of the clinical implications. Clinicians will rely on the coverage of the basic science of neurogenetics and the methods for evaluating patients with biochemical abnormalities or gene mutations, including links to genetic testing for specific diseases. Comprehensive coverage of the neurogenetic foundation of neurological and psychiatric disease. Detailed introduction to both clinical and basic research implications of molecular and genetic understanding of the brain. Detailed coverage of genomics, animal models, and diagnostic methods, with new coverage of evaluating patients with biochemical abnormalities or gene mutations. **Law, Practice and Politics of Forensic DNA Profiling** Victor Toom, Matthias Wienroth, Amade M'charek, 2022-12-30 This collection reviews developments in DNA profiling across jurisdictions, with a focus on scientific and technological developments as well as their political, ethical, and socio-legal aspects. Written by leading scholars in the fields of social studies of forensic science, science and technology studies, and socio-legal studies, the book provides state-of-the-art analyses of forensic DNA practices in a diverse range of jurisdictions, new and emerging forensic genetics technologies, and issues of legitimacy. The work articulates the various forms of technolegal politics involved in the everyday, standardised, and emerging practices of forensic genetics and engages with the most recent scholarly and policy literature. In analyses of empirical cases and by taking into account the most recent technolegal developments, the book explores what it means to live in a world that is increasingly governed through anticipatory crime control and its related risk management and bio-surveillance mechanisms, which intervene with and produce political and legal subjectivities through human bodies in their DNA. This volume is an invaluable resource for those working in the areas of social studies of forensic science, science and technology.
