### Protonium/Question

6. Neurotransmitters

- ☐ A) generate very different potentials at a given cell membrane
- ☐ B) generate action potentials
- ☐ C) spread throughout the nervous system via electroosmosis
- ☒ D) generate potentials and a given cell will respond
- ☐ E) travel all day during

7. Which factor would release a synaptic cleft neurotransmitter?

- ☐ A) neurohypophysis
- ☐ B) neurohypothalamic cells
- ☒ C) nerve impulse
- ☒ D) nerve impulse
- ☐ E) neurohypothalamic cells and neurohypothalamic cells

8. Synaptic transmission

- ☐ A) synapse 1
- ☒ B) synapse 2
- ☐ C) synapse 3
- ☐ D) synapse 4
- ☐ E) synapse 5

9. Synaptic transmission

- ☐ A) neurotransmitter release and action potential are released before
- ☒ B) neurotransmitter release and action potential are released after
- ☐ C) action potential
- ☐ D) neurotransmitter release requires some release
- ☐ E) neurotransmitter release

10. Which one of the following is not a function of the nervous system?

- ☐ A) Store and transmit information about environmental changes as they occur
- ☒ B) Store and transmit information about changes
- ☐ C) Store and transmit information about changes
- ☐ D) Store and transmit information about changes
- ☐ E) Store and transmit information about changes

11. A neuron is made up of

- ☐ A) neurocytoplasmic bodies and axon (neurocytoplasm)
- ☐ B) cell body and axon (neurocytoplasm and axon)
- ☒ C) cell body and axon (neurocytoplasm and axon)
- ☐ D) cell body and axon (neurocytoplasm and axon)
- ☐ E) cell body and axon (neurocytoplasm and axon)

12. Which factor would release a synaptic cleft neurotransmitter?

- ☐ A) nerve impulse
- ☒ B) nerve impulse

Göransson, 2021-02-18 The theory of evolution is considered the unifying theory of biology An accurate understanding of evolution is vital both for the understanding of diverse topics in biology but also for societal issues such as antibiotic resistance or biodiversity In contrast decades of research in science education have revealed that students have difficulties to accurately understand evolutionary processes such as mutation and natural selection The majority of this research relies on a conceptual framework of so called key concepts variation selection inheritance derived from scholarly descriptions of natural selection Recent research suggests that non domain specific concepts such as randomness probability spatial and temporal scales so called threshold concepts are important for evolution understanding in addition to the key concepts Thus many important elements of evolutionary theory are counter intuitive or lie outside direct perception Hence representations such as visualizations models and simulations are considered to be important for teaching and learning evolution While the importance of visualizations is generally acknowledged for science education less is known about how visual design can facilitate students understanding of threshold concepts such as random mutations or spatial scales This thesis uses the Model

of Educational Reconstruction MER as the guiding framework for exploring the significance of threshold concepts by analysing the conceptual content of students explanations and extant visualizations of natural selection MER combines scientific content with teaching and learning perspectives for the analysis and design of learning environments Content analysis of visualizations available online showed that most fail to fully represent the basic principles of natural selection variation selection and inheritance Moreover the representational potential of visualizations was seldom used to represent threshold concepts such as randomness in origin of variation Visualizations were also biased to animals as the context of evolution Similarly upper secondary and tertiary students explanations of natural selection were seldom complete in terms of the basic principles and threshold concepts such as randomness were often lacking Especially significant was the almost complete lack of randomness in upper secondary students explanations In addition threshold concepts were context sensitive across the items used bacteria cheetah and salamander for example spatial scale and randomness was significantly more common in responses to the bacteria item compared to the cheetah and salamander items Considering the results from these studies three interactive visualizations were developed evolution of antibiotic resistance and fur colouration in mice The visualization design was conducted iteratively following a Design Based Research approach and evaluated in classroom settings in secondary and upper secondary Swedish schools The results showed that visualizations targeting randomness and genetic level events such as mutations can guide students towards a more scientific conception of natural selection However there were differences across the visualizations and student samples In addition while students often inferred randomness from the visuals the results showed that integration of randomness into explanations of natural selection may be challenging Hence future research should explore the role of guidance and reflection for students understanding of randomness The thesis also discusses the role of students intuitive conceptions in relation to the use of interactive visualizations and how these preconceptions interact with the presented message By using the theory of frame semantics framing effects and conceptual integration students issues of achieving an accurate understanding of evolution are discussed in relation to the theory of conceptual change Implications for teaching and learning natural selection as well as visualization design for learning are also discussed

Evolutionsteorin förstås ofta från biologins förändrade teori Vikten av en korrekt och användbar evolutionsteori har dock ofta betonats inte minst för eleverna förståelse inom biologins olika delar men också för att fatta beslut i samhället som exempelvis antibiotikaresistens Många av de centrala delarna av evolutionsteorin är kontraintuitiva eller abstrakta och decennier av forskning har visat att elever har svårigheter att förstå evolutionens processer som mutation och naturligt urval Representationer som visualiseringar modeller och simuleringar är dock viktiga för att ge elever direkta erfarenheter av evolutionens processer och om vikten av visualiseringar är allmänt accepterad inom naturvetenskapsundervisningen är det mindre känt hur visualiseringars utformning specifikt bidrar till att utveckla elevernas förståelse av vetenskapliga fenomen som evolution Dessutom har forskningen på elevernas evolutionsteori bidragit till stor del fokuserat
