Sample Chapters FOR THE BETTER Marvin W Berkowitz University of Missouri St Louis THE OVERLOOKED INEQUITY Eric Schaps The Journal of Character Education is the only professional journal in education devoted to character education It is designed to cover the field from the latest research to applied best practices We include original research reports editorials and conceptual articles by the best minds in our field reviews of the latest books and other relevant strategies and manuscripts by educators that describe best practices in teaching and learning related to character education The Journal of Character Education has for over a decade been the sole scholarly journal focused on research theory measurement and practice of character education In this issue of the Journal of Character Education we return to something foundational and introduce something new The foundational element is a set of six independent scholarly manuscripts by a mix of emerging and established scholars We are pleased to introduce a new feature of the Journal of Character Education in this issue namely a section we are calling simply Opinion We began the JCE with an exclusive focus on publishing scholarship because there was no scholarly journal that focused on character education Over time we realized that we wanted to speak about practice and particularly to practitioners as well Hence we created a section we call Voices to present innovations and perspectives representing the voices of exemplary practitioners of character education Now we introduce the Opinion section that will allow us to publish perspectives from leading authorities in the field that might be more provocative We would love to hear responses to either or both opinion articles and are working on plans to share such responses perhaps on one of our related websites At this point we plan on publishing more opinion articles and for now by invitation However we are always willing to consider unsolicited articles for possible inclusion in the JCE Catalog of Copyright Entries. Systems is a sequel to the author's earlier text *Space Transportation A Systems Approach to Analysis and Design*. Both texts represent the most comprehensive exposition of the existing knowledge and practice in the design and project management of space transportation systems and they reflect a wealth of experience by the author with the design and management of space systems. The text discusses new conceptual changes in the design philosophy away from multistage expendable vehicles to winged reusable launch vehicles and presents an overview of the systems engineering and vehicle design process as well as systems trades and analysis. Individual chapters are devoted to specific disciplines such as aerodynamics, aerothermal analysis, structures, materials, propulsion, flight mechanics and trajectories, avionics and computers and control systems. The final chapters deal with human factors, payload, launch and mission operations, safety and mission assurance. The two texts by the author provide a valuable source of information for the space transportation community of designers, operators and managers. A companion CD-ROM succinctly packages some oversized figures and tables, resources for systems engineering and launch ranges and a compendium of software programs. The computer programs include the USAF AIRPLANE AND MISSILE DATCOM CODES with extensive documentation, COSTMODL for software costing, OPGUID launch vehicle trajectory generator, SUPERFLO, a series of 11 programs intended for solving compressible flow problems in ducts and pipes found in industrial facilities and a wealth of Microsoft Excel spreadsheet programs covering the disciplines of statistics, vehicle trajectories, propulsion performance, math utilities.

Exploring Electron-Neutrino-Argon Interactions Krishan V. J. Mistry, 2023-01-01

This thesis explores the electron neutrino and antineutrino cross section on argon using the MicroBooNE liquid argon time projection chamber detector. With only a handful of electron neutrino cross section measurements in the hundred MeV to GeV range to date and only one of them on argon as the target nucleus, the result from the ArgoNeuT experiment, there is a need for new large statistics electron neutrino cross section measurements. The precise knowledge of the electron neutrino cross section is fundamental for tests of lepton universality, making meaningful interpretations of neutrino oscillations and beyond the Standard Model search experiments involving electron neutrinos. Moreover, the appearance of electron neutrinos in a beam of predominantly muon neutrinos is the key signature in searches for sterile neutrinos in short baseline experiments and measurements of Charge Parity violation in long baseline oscillation experiments. The measurements in this thesis utilize the NuMI neutrino beamline, which is highly off axis to the MicroBooNE detector but provides a rich source of electron neutrinos. Critical to the measurement of the cross section is a detailed understanding of the flux of neutrinos at MicroBooNE and the uncertainties associated with it. The neutrino flux prediction tools used for the on axis NuMI experiments are described and studied in detail for their implementation in the case of MicroBooNE. These tools will form the foundation for many future measurements using the NuMI beam at MicroBooNE. With the use of argon as a target for studying neutrino interactions, the large size of the nucleus introduces nuclear effects which impact the kinematics and multiplicities of the particles produced in the initial interaction.

Such effects are complicated to model and are currently an active area of research with various models and neutrino generators available. The measurements in this thesis compare the electron neutrino argon cross section to several neutrino generators with differing physics models. These comparisons provide important information in the modelling of neutrino interactions with nuclei such as argon. The target audience for this thesis is aimed at particle physics graduate students particularly in the field of neutrino physics working with noble element time projection chambers. Deformation Characteristics of Geomaterials / Comportement Des Sols Et Des Roches Tendres H. Di Benedetto, T. Doanh, H. Geoffroy, C. Sauzeat, 2003-01-01 The main themes of this conference are experimental investigations into deformation properties from very small strains to beyond failure laboratory in situ and field observation interpretations and behaviour characterization and modelling. Emphasis is placed on exploring recent investigations into time related stresses and on applying advanced geotechnical testing to real engineering problems. *Scientific and Technical Aerospace Reports*, 1995 **Dr. Dobb's Journal of Software Tools for the Professional Programmer**, 1987 **Concrete Permeability and Durability Performance**

Roberto J. Torrent, Rui D. Neves, Kei-ichi Imamoto, 2021-12-22 Durability and service life design of concrete constructions have considerable socio economic and environmental consequences in which the permeability of concrete to aggressive intruders plays a vital role. Concrete Permeability and Durability Performance provides deep insight into the permeability of concrete moving from theory to practice and presents over 20 real cases such as Tokyo's Museum of Western Art Port of Miami Tunnel and Hong Kong Zhuhai Macao sea link including field tests in the Antarctic and Atacama Desert. It stresses the importance of site testing for a realistic durability assessment and details the Torrent Method for non destructive measurement of air permeability. It also delivers answers for some vexing questions: Should the coefficient of permeability be expressed in m^2 or m/s ? How to get a mean pore radius of concrete from gas permeability tests? Why should permeability preferably be measured on site? How can service life of reinforced concrete structures be predicted by site testing of gas permeability and cover thickness? Practitioners will find stimulating examples on how to predict the coming service life of new structures and the remaining life of existing structures based on site testing of air permeability and cover thickness. Researchers will value theoretical principles testing methods as well as how test results reflect the influence of concrete mix.
