Psychiatry in the Scientific Image Dominic Murphy, 2012-01-13 An analysis of the understanding classification and explanation of mental disorders that proposes that psychiatry adopt the best practices of the cognitive sciences In Psychiatry in the Scientific Image Dominic Murphy looks at psychiatry from the viewpoint of analytic philosophy of science considering three issues how we should conceive of classify and explain mental illness If someone is said to have a mental illness what about it is mental What makes it an illness How might we explain and classify it A system of psychiatric classification settles these questions by distinguishing the mental illnesses and showing how they stand in relation to one another This book explores the philosophical issues raised by the project of explaining and classifying mental illness Murphy argues that the current literature on mental illness exemplified by the Diagnostic and Statistical Manual of Mental Disorders is an impediment to research it lacks a coherent concept of the mental and a satisfactory account of disorder and yields too much authority to commonsense thought about the mind He argues that the explanation of mental illness should meet the standards of good explanatory practice in the cognitive neurosciences and that the classification of mental disorders should group symptoms into conditions based on the causal structure of the normal mind

In touch with the future Alberto Gallace, Charles Spence, 2014-01-30 Out of all the human senses touch is the one that is most often unappreciated and undervalued Yet the surface of the human body the skin is actually one huge sheet of tactile receptors It provides us with the means to connect with our surroundings Despite the important role that vision plays in our everyday lives it is the skin that constitutes both the oldest and by far the largest of our sense organs The skin protects our body from the external world and at the same time informs us about what occurs on its surface In Touch With The Future explores the science of touch bringing together the latest findings from cognitive neuroscience about the processing of tactile information in humans The book provides a comprehensive overview of scientific knowledge regarding themes such as tactile memory tactile awareness consciousness tactile attention the role of touch in interpersonal and sexual interactions and the neurological substrates of touch It highlights the many ways in which our growing understanding of the world of touch can and in some cases already are being applied in the real world in everything from the development of virtual reality VR environments tablet PCs mobile phones and even teledildonics the ultimate frontier in terms of adult entertainment In addition the book shows how the cognitive neuroscience approach to the study of touch can be applied to help improve the design of many real world applications products as well as to many of our everyday experiences such as those related to the

appreciation of food marketing packaging design the development of enhanced sensory substitution systems art and man machine interfaces Crucially the authors makes a convincing argument for the view that one cannot really understand touch especially not in a real world context without placing it in a multisensory context That is the senses interact to influence tactile perception in everything from changing the feel of a surface or product by changing the sound it makes or the fragrance it has For students and researchers in the brain sciences this book presents a valuable and fascinating exploration into one of our least understood senses
