
GIS EXAM QUESTIONS AND ANSWERS WITH CERTIFIED SOLUTIONS

What is GIS? ✓✓ Definition must involve three elements: (1) GIS is a computer system, (2) GIS uses spatially referenced or geographical data, (3) GIS carries out various management and analysis tasks on these data

A geographic information system is a system designed to capture, store, manipulate, analyse, manage, and present spatial or geographic data

Why GIS can be difficult to define? ✓✓ Difficult to define because any definition of GIS will depend on who is giving it and their background and stance; definition also likely to change as technology advances

GIS is frequently used in applications such as siting new industrial developments; What are the advantages of using GIS in this context? ✓✓ After identifying relevant siting factors and collecting appropriate data, digitising of data is possible

GIS software can be used to combine data layers, representing different siting criteria

An Introduction to R for Spatial Analysis and Mapping Chris Brunsdon, Lex Comber, 2014-04-30 In an age of big data data journalism and with a wealth of quantitative information around us it is not enough for students to be taught only 100 year old statistical methods using out of the box software They need to have 21st century analytical skills too This is an excellent and student friendly text from two of the world leaders in the teaching and

development of spatial analysis It shows clearly why the open source software R is not just an alternative to commercial GIS it may actually be the better choice for mapping analysis and for replicable research Providing practical tips as well as fully working code this is a practical how to guide ideal for undergraduates as well as those using R for the first time It will be required reading on my own courses Richard Harris Professor of Quantitative Social Science University of Bristol R is a powerful open source computing tool that supports geographical analysis and mapping for the many geography and non geography students and researchers interested in spatial analysis and mapping This book provides an introduction to the use of R for spatial statistical analysis geocomputation and the analysis of geographical information for researchers collecting and using data with location attached largely through increased GPS functionality Brunsdon and Comber take readers from zero to hero in spatial analysis and mapping through functions they have developed and compiled into R packages This enables practical R applications in GIS spatial analyses spatial statistics mapping and web scraping Each chapter includes Example data and commands for exploring it Scripts and coding to exemplify specific functionality Advice for developing greater understanding through functions such as locator View and alternative coding to achieve the same ends Self contained exercises for students to work through Embedded code within the descriptive text This is a definitive how to that takes students of any discipline from coding to actual applications and uses of R

Technologies and Geography Education in a Changing World Osvaldo Muñiz Solari, Ali Demirci, Joop van der

Schee, 2015-08-31 This book is an initiative presented by the Commission on Geographical Education of the International Geographical Union. It focuses particularly on what has been learned from geospatial projects and research from the past decades of implementing geospatial technologies (GST) in formal and informal education. The objective of this publication is to inform an international audience of teachers, professionals, scholars, and policymakers about the state of the art and prospects of geospatial practices (GPs) as organized activities that use GST and lessons learned in relation to geographical education. GST make up an advanced body of knowledge developed by practitioners of geographic information systems (GIS), remote sensing (RS), global positioning systems (GPS), and digital cartography (DC). GST have long been applied in many different sectors; however, their first use in higher education began in the early 1980s and then diffused to secondary schools during the 1990s. Starting with GIS and RS, it evolved into a much broader context as GST expanded to include GPS and DC with new communication technologies and Internet applications. GST have been used around the world as a combination of tools and special techniques to make research, teaching, and learning more effective. Energy Research Abstracts, 1987 AP
