

Activity C (continued from previous page)

4. Observe: Click **New** until you see a warm front, represented by a row of semicircles. A warm front is a boundary between a cold air mass and an advancing warm air mass. The semicircles point in the direction that the warm front is moving.

Sketch the warm front on the map at right. Draw and label the following features:

- The location of the low-pressure system.
- The warm front.
- Any clouds associated with the warm front. (Select **Show satellite image**.)
- The temperature on each side of the warm front.
- The wind direction across the front.
- Any precipitation that is occurring. (Select **Show radar**.)

5. Compare: Click **New** so that you can observe several different warm fronts. Based on your observations, what do warm fronts seem to have in common? all warm fronts have rain, and low pressure

6. Analyze: Warm air is less dense than cold air. When warm air hits cold air it rises up over the cold air. The rising warm air cools, resulting in condensation, clouds, and gentle rain.

On the diagram, label the warm air mass, cold air mass, and warm front. Draw an arrow to show the direction that the warm air is moving.

Why do clouds form in front of a warm front?

water cannot form in a high pressure

7. Summarize: Describe what the weather would be like as a warm front passes. Then, describe what would occur as a cold front passes. Use extra pages if necessary.

When a warm front passes it will be warm and rainy, while a cold front would be cold and clear.
