

**Activity B:****Skin color**Get the Gizmo ready:

- Clear all parents and offspring from the Gizmo by dropping them into the **Exit** hole.
- Create a green alien and a pink alien.

**Question: How is alien skin color inherited?**

1. Predict: What do you think the offspring of a green alien and pink alien will look like?

green with pink spots

2. Experiment: Test your prediction with the Gizmo. What did you find?

it had pink dots and was green.

When offspring show a mixture of parent traits, the traits are called **codominant traits**.

3. Predict: What do you think will happen when you breed two green-and-pink spotted aliens?

recessive because there won't be just one color

4. Experiment: Follow the steps below. (You may have already done the first step or two.)

- Place a green alien and a pink alien in the locations for **Parent 1** and **Parent 2**.
- Breed these parents twice. Drag both offspring to the spaces below the **Nest**.
- Drag the two green-and-pink offspring up to become the new **Parent 1** and **Parent 2**.
- Breed these aliens 10 times. Record how many times each skin color occurred in their offspring. (For example, if there were 2 green offspring, write "2" below "green.")

Skin color	Green	Green and pink	Pink
Number of offspring	4	4	2

5. Analyze: Look at the results of your experiment.

A. What kind of skin did most of the offspring have?

green/pink

B. Did *all* of the offspring have green and pink skin?

none

6. Think and discuss: For a codominant trait, do the offspring of identical parents always look like the parents? Explain your answer.

the parent with straight antenna is dominant because the offspring received straight antennas.
