Глазман,Urii Il'ich Liubich,1974 First published in Russian in 1969 this remarkable book develops the subject of linear
algebra in a novel fashion it presents a logically interconnected sequence of propositions and problems some 2400 in all
without proofs but with a scaffolding of hints and pointers The student is asked to work out formal proofs systematically
proceeding from simple verifications to relatively advanced strategies and techniques of proof The material is organized into
ten chapters The authors have based their approach on the fundamental pedagogic proposition that the best way to learn
mathematics is to do mathematics that the essence of understanding any given set of mathematical propositions comes when
the student succeeds in proving them for himself however roughly rather than after a mere reading of a series of proofs
however polished This aspect of the book will appeal to strongly motivated students it can be used as a resource for
independent study and in cooperative seminars preferably without faculty presence Of course it can also be used as the basis
of more conventional lecture presentations It is suggested that the book be introduced at the senior or the first year graduate
level The book is also meant to give insight into functional analysis which may be formulated as linear analysis within an
infinite dimensional framework As the student allows his consideration of the propositions move toward the limiting case of
unrestricted dimensionality he will find that his conceptual outlook approaches that proper to functional analysis In that
regard the book represents an introduction to the latter subject free of the difficulties inherent in the explicit admission of
infinities
