*Labyrinth of Thought* José Ferreirós,2008-10-04 Labyrinth of Thought

discusses the emergence and development of set theory and the set theoretic approach to mathematics during the period 1850-1940. Rather than focusing on the pivotal figure of Georg Cantor, it analyzes his work and the emergence of transfinite set theory within the broader context of the rise of modern mathematics. The text has a tripartite structure. Part 1, *The Emergence of Sets within Mathematics*, surveys the initial motivations for a mathematical notion of a set within several branches of the discipline: geometry, algebra, algebraic number theory, real and complex analysis, emphasizing the role played by Riemann in fostering acceptance of the set theoretic approach. In Part 2, *Entering the Labyrinth*, attention turns to the earliest theories of sets, their evolution, and their reception by the mathematical community; prominent are the epoch-making contributions of Cantor and Dedekind and the complex interactions between them. Part 3, *In Search of an Axiom System*, studies the four-decade period from the discovery of set-theoretic paradoxes to Gödel's independence results, an era during which set theory gradually became assimilated into mainstream mathematics; particular attention is given to the interactions between axiomatic set theory and modern systems of formal logic, especially the interplay between set theory and type theory. A new Epilogue for this second edition offers further reflections on the foundations of set theory, including the dichotomy conception and the well-known iterative conception.

**Complex Non-Kähler Geometry** Sławomir Dinew, Sébastien Picard, Andrei Teleman, Alberto Verjovsky, 2019-11-05. Collecting together the lecture notes of the CIME Summer School held in Cetraro in July 2018, the aim of the book is to introduce a vast range of techniques which are useful in the investigation of complex manifolds. The school consisted of four courses focusing on both the construction of non-Kähler manifolds and the understanding of a possible classification of complex non-Kähler manifolds. In particular, the courses by Alberto Verjovsky and Andrei Teleman introduced tools in the theory of foliations and analytic techniques for the classification of compact complex surfaces and compact Kähler manifolds, respectively. The courses by Sébastien Picard and Sławomir Dinew focused on analytic techniques in Hermitian geometry, more precisely on special Hermitian metrics and geometric flows, and on pluripotential theory in complex non-Kähler geometry.

Logic Colloquium '01 Matthias Baaz, Sy-David Friedman, Jan Krajíček, 2017-03-30. Since their inception, the *Perspectives in Logic* and *Lecture Notes in Logic* series have published seminal works by leading logicians. Many of the original books in the series have been unavailable for years, but they are now in print once again. This volume, the twentieth publication in the *Lecture Notes in Logic* series, contains the proceedings of the 2001 European Summer Meeting of the Association for Symbolic Logic, held at the Vienna University of Technology. Two long articles present accessible expositions on resolution theorem proving and the determinacy of long games. The remaining articles cover separate research topics in many areas of mathematical logic, including applications in computer science, proof theory, set theory, model theory, computability theory, linguistics, and aspects of philosophy. This collection will interest not only mathematical logicians but also philosophical logicians, historians of logic, computer scientists, formal linguists, and mathematicians working in algebra, abstract analysis, and topology.
