It provides a flexible blend of theory and engaging applications for students within engineering, science, mathematics, business management, and physics. It is organized into three parts that contain core and optional sections. There is then ample time for the instructor to select the material that gives the course the desired flavor. Part 1 introduces the basics, presenting systems of linear equations, vectors, and subspaces of \mathbb{R}^n , matrices, linear transformations, determinants, and eigenvectors. Part 2 builds on the material presented in Part 1 and goes on to introduce the concepts of general vector spaces, discussing properties of bases, developing the rank-nullity theorem, and introducing spaces of matrices and functions. Part 3 completes the course with important ideas and methods of numerical linear algebra, such as ill conditioning, pivoting, and LU decomposition. Throughout the text, the author takes care to fully and clearly develop the mathematical concepts and provide modern applications to reinforce those concepts. The applications range from theoretical applications within differential equations and least square analysis to practical applications in fields such as archeology, demography, electrical engineering, and more. New exercises can be found throughout that tie back to the modern examples in the text.

Key Features of the Eighth Edition: Updated and revised throughout with new section material and exercises. Each section begins with a motivating introduction which ties material to the previously learned topics. Carefully explained examples illustrate key concepts throughout the text. Includes such new topics such as QR Factorization and Singular Value Decomposition. Includes new applications such as a Leslie Matrix model that is used to predict birth and death patterns of animals. Includes discussions of the role of linear algebra in many areas such as the operation of the search engine Google and the global structure of the worldwide air transportation network. A MATLAB manual that ties into the regular course material is included as an appendix. These ideas can be implemented on any matrix algebra software package. This manual consists of 28 sections that tie into the regular course material. Graphing Calculator Manual included as an appendix. A Student Solutions Manual that contains solutions to selected exercises is available as a supplement. An Instructors Complete Solutions Manual, test bank, and PowerPoint Lecture Outlines are also available. Available with WebAssign Online Homework Assessment.

Exercises in Numerical Linear Algebra and Matrix Factorizations Tom Lyche,Georg Muntingh,Øyvind Ryan,2020-11-02 To put the world of linear algebra to advanced use it is not enough to merely understand the theory there is a significant gap between the theory of linear algebra and its myriad expressions in nearly every computational domain To bridge this gap it is essential to process the theory by solving many exercises thus obtaining a firmer grasp of its diverse applications Similarly from a theoretical perspective diving into the literature on advanced linear algebra often reveals more and more topics that are deferred to exercises instead of being treated in the main text As exercises grow more complex and numerous it becomes increasingly important to provide supporting material and guidelines on how to solve them supporting students learning process This book provides precisely this type of supporting material for the textbook Numerical Linear Algebra and Matrix Factorizations published as Vol 22 of Springer s Texts in Computational Science and Engineering series Instead of omitting details or merely providing rough outlines this book offers detailed proofs and connects the solutions to the corresponding results in the textbook For the algorithmic exercises the utmost level of detail is provided in the form of MATLAB implementations Both the textbook and solutions are self contained This book and the textbook are of similar length demonstrating that solutions should not be considered a minor aspect when learning at advanced levels
