searching for the specific question problem that you have and going directly to the corresponding section What version of Microsoft Access is this Guide for Microsoft Access MS Access is a computer program for building maintaining and using relational databases The explanation of the user interface and the exercises in this guide are for the 2021 English version of MS Access 365 which is very similar to MS Access 2019 and to MS Access 2016 Besides many of the concepts explained in this book are version independent and apply to database design and database concepts themselves being equally applicable to past and future versions What is not in this Guide This Lightning Guide explains in a clear concise and detailed way almost all MS Access features and commands which will allow you to exploit MS Access in great dept However be aware this Guide covers Reports very lightly and does not cover macros I would also like to clarify that this guide does not cover how to program in VBA It explains how to use VBA code in MS Access and how VBA data types interact with SQL ones but it does not provide a course on how to program in VBA In case that you know some other imperative programming language like C or Java you will find VBA straightforward and will be able to code with it very fast using a few tips from web pages
