Sansavini, Ali Ayoub, 2023-01-20 After a major disaster when investigators are piecing together the story of what happened a striking fact often emerges before disaster struck some people in the organization involved were aware of dangerous conditions that had the potential to escalate to a critical level But for a variety of reasons this crucial information did not reach decision makers So the organization moved ever closer to catastrophe effectively unaware of the possible threat despite the fact that some of its employees could see it coming What is the problem with communication about risk in an organization and why does this problem exist What stops people in organizations or project teams from freely reporting and discussing critical risks This book seeks to answer these questions starting from a deep analysis of 20 disasters where the concealment of risks played a major part These case studies are drawn from around the world and span a range of industries civil nuclear power coal oil and gas production hydropower energy metals and mining space exploration transport finance retail manufacturing and even the response of governments to wars famines and epidemics Together case studies give an insight into why people hesitate to report risks and even when they do why their superiors often prefer to ignore the news The book reviews existing research on the challenges of voice and silence in organizations This helps to explain more generally why people dread passing on bad news to others and why in the workplace they prefer to keep quiet about unpleasant facts or potential risks when they are talking to superiors and colleagues The discussion section of the book includes important examples of concealment within the Chinese state hierarchy as well as by leading epidemiologists and governments in the West during the novel coronavirus outbreak in Wuhan in 2019 2020 The full picture of the very early stage of the COVID 19 pandemic remains unclear and further research is obviously needed to better understand what motivated some municipal provincial and national officials in China as well as Western counterparts to obfuscate facts in their internal communications about many issues associated with the outbreak Hydraulic Structures Sheng-Hong Chen, 2015-06-09 This book discusses in detail the planning design construction and management of hydraulic structures covering dams spillways tunnels cut slopes sluices water intake and measuring works ship locks and lifts as well as fish ways Particular attention is paid to considerations concerning the environment hydrology geology and materials etc in the planning and design of hydraulic projects It also considers the type selection profile configuration stress stability calibration and engineering countermeasures flood releasing arrangements and scouring protection operation and maintenance etc for a variety of specific hydraulic structures The book is primarily intended for engineers undergraduate and graduate students in the field of civil and hydraulic engineering who are faced with the challenges of extending our understanding of hydraulic structures ranging from traditional to groundbreaking as well as designing constructing and managing safe durable hydraulic structures that are economical and environmentally friendly Twenty-Eighth International Congress on Large Dams/Vingt-Huitième Congrès International des Grands Barrages ICOLD / CIGB, 2025-05-08 The International Commission on Large Dams ICOLD held its 28th International Congress in Chengdu China 16 May 23 May 2025 The proceedings of the
