

Reassembly procedure is the reverse of disassembly. Gears 7 and 11 should be timed so that steering wheel and tractor front wheels are in straight ahead position.

ENGINE

REMOVE AND REINSTALL

All Models

3. To remove the engine assembly, loosen the hood locks and lift hood forward. On battery start models, disconnect battery cables and remove the battery. Disconnect wires from the starter-generator and ignition coil. Then, on all models, disconnect the throttle and choke control cables. Unbolt and remove the belt guard from right side of engine. Remove the engine draw bolt from front of tractor, then remove the engine mounting bolts. Remove the engine drive belts and lift the engine from tractor.

Reinstall engine by reversing the removal procedure. Adjust the engine drive belts as follows: Tighten the engine draw bolt and move engine forward to tighten the engine drive belts. Make certain that engine drive pulley and pulley on the jackshaft are aligned, then tighten the engine mounting bolts.

OVERHAUL

All Models

5. Engine make and model are listed at the beginning of this section. To overhaul the engine components and accessories, refer to the Briggs & Stratton and Kohler sections of this manual.

CLUTCH AND BRAKE

The clutch used on all models is the belt idler type and is operated by the clutch-brake pedal on left side of tractor. When the pedal is depressed, clutch idler tension is removed from the transaxle drive belts (1—Fig. G13). This allows the clutch drive pulley (31) to turn free within the transaxle drive belts. At this time, the brake band (5) is drawn tight on brake drum (3), stopping the tractor.

All Models

7. **ADJUSTMENT.** The clutch idler is spring loaded and requires no adjustment. The clutch-brake pedal (29—Fig. G13) can be adjusted by loosening bolt (21) and moving the pedal on adjusting plate (22). When the desired pedal position is obtained, tighten bolt (21).

Adjust the brake by turning adjusting nut (4) on rear of brake rod (15). Depress the clutch-brake pedal and check to see that brake band (5) does not tighten on brake drum (3) until clutch idler tension is removed from the transaxle drive belts.

8. **3-SPEED DRIVE BELTS.** To remove the transaxle drive belts (1—Fig. G13), first unbolt and remove the belt guide from around the

transaxle input pulley (2). Remove the cotter pin from left end of shaft (16). Remove bolt (14), then lift out idler (12) with spacer (13) and bushing (11). Slide shaft (16) to the left. Unbolt bracket (8) from tractor frame. Remove the belts over the end of the shaft assemblies.

The transaxle drive belts are serviced only as a matched set and both belts should be renewed at the same time. Install the new belts by reversing the removal procedure. Check the brake adjustment as outlined in paragraph 7 and adjust if necessary.

TRANSAXLE

The transmission gears, shafts, differential and axle shafts are contained in one case. The three speed models have 3 forward gears and 1 reverse. The four speed models have 4 forward gears and 1 reverse.

REMOVE AND REINSTALL

All Models

9. To remove the transaxle assembly, first unbolt and remove the belt guide from around the transaxle input pulley. Depress the clutch-brake pedal and remove the drive belts from the transaxle input pulley. Disconnect the brake linkage. Block up under transaxle to prevent the unit from tilting forward. Remove the cap screws securing transaxle to tractor frame. Using a suitable jack or hoist, raise rear of frame and roll transaxle assembly rearward from tractor.

When reinstalling the assembly, reverse the removal procedure and adjust brake linkage as outlined in paragraph 7.

OVERHAUL

3-Speed Models

10. With the transaxle assembly removed as outlined in paragraph 9, remove the drain plug and drain the lubricant. Remove the brake band, brake drum and input pulley. Loosen the set screws and remove rear wheel and hub assemblies. Place shift lever in neutral position, remove the three cap screws from shift lever housing, then withdraw shift lever assembly. Remove the cap screws securing transaxle cover (38—Fig. G14) to case (34). Place the unit on the edge of a bench or in a vise with the right side pointing downward. Drive the drain plug down out of cover. Remove all rust, paint and burrs from outer ends of axle shafts. Separate cover from case and lift cover upward off the axle shaft. Break shaft (33) and idler gear (32) will be removed with cover. Remove output shaft (43) with output gear (44), spacer (45) and washer (42). Withdraw the differential and axle shaft assembly and lay aside for later disassembly. Hold the upper ends of shifter rods together and lift out shifter rods, forks, shifter stop, shaft (36) and sliding gears (28 and 29) as an assembly. Remove reverse idler gear (17), shaft (18) and spacer (16), then remove idler shaft (34) with idler gears (35, 37 and 38) and spacers (35 and 38). Input shaft (30) and input gear (31) can now be removed from case. To remove the brake shaft (33) and gear (32) from cover, block up under gear (32) and press shaft out of gear. **CAUTION:** Do not allow the cover to support any part of the pressure required to press brake shaft from gear.
