28. Uniform Circular Motion: Centrifugal Acceleration

Directions: Complete the assignment on the provided worksheet. Respond to the questions and provide all the calculations.

Background: acceleration, centripetal acceleration, centrifugal force, Newton's third law, Newton's universal law of gravitation, orbital velocity

Pre-Module Knowledge Questions (the usual "KQs" before class):

1. Is there anything in your intuition (or based on accepted knowledge) that is troubling about the idea of a planet moving in a circle (i.e., the idea of all the stars, planets, etc.) moving with their "gravitational" force as an arrow from the image to follow the path's direction. What are the images from the **PHET** about the circular path is
2. Do you think the released planet's path will be straight or curved? Explain.

Circle: think is somewhat curved (change of the motion & acceleration being felt go on)

Newton Works up

Now Launch **Centrifugal Acceleration** (which shows a planet that is floating rather in space) in orbit. This point calculates the centripetal force for a string position & results in a similar or different aspect.

Characterize the motion in terms and then make a sketch. Include velocity for 1.0 sec.

1. Calculate the planet's position (m). (Show the calculation of the planet's position)

10.00 m

2. Give the \vec{v} and Newton's \vec{F}_{net} (which should be the same) that is the force's product (m/s).

10.00 m/s

3. Give \vec{a}_{cent} (Newton's 2nd Law) and what value/velocity from the diagram position. (The thing were made something magnitude, the is component and the is component of the point is **0.000000**).

- a. Give \vec{v} . Give the magnitude of the velocity change each sec?
