Digital Image Processing Rafael C. Gonzalez, Richard Eugene Woods, 2008 A comprehensive digital image processing book that reflects new trends in this field such as document image compression and data compression standards The book includes a complete rewrite of image data compression a new chapter on image analysis and a new section on image morphology

Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06 Remote Sensing Digital Image Analysis provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background The chapters progress logically through means for the acquisition of remote sensing images techniques by which they can be corrected and methods for their interpretation The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter

Algorithms and Architectures for Parallel Processing Sang-Soo Yeo, Jong Hyuk Park, Laurence Tianruo Yang, Ching-Hsien Hsu, 2010-05-29 It is our great pleasure to welcome you to the proceedings of the 10th annual event of the International Conference on Algorithms and Architectures for Parallel Processing ICA3PP ICA3PP is recognized as the main regular event covering the many dimensions of parallel algorithms and architectures encompassing fundamental theoretical approaches practical experimental projects and commercial components and systems As applications of computing systems have permeated every aspect of daily life the power of computing systems has become increasingly critical Therefore ICA3PP 2010 aimed to permit researchers and practitioners from industry to exchange information regarding advancements in the state of the art and practice of IT driven services and applications as well as to identify emerging research topics and define the future directions of parallel processing We received a total of 157 submissions this year showing by both quantity and quality that ICA3PP is a premier conference on parallel processing In the first stage all papers submitted were screened for their relevance and general submission requirements These manuscripts then underwent a rigorous peer review process with at least three reviewers per paper In the end 47 papers were accepted for presentation and included in the main proceedings comprising a 30% acceptance rate
