Grade Geography Paper November 2013:

Planning and Design for Sustainable Urban Mobility Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges. Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world. The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner. However, a number of challenges faced by urban transport systems such as greenhouse gas emissions, noise, and air pollution, and road traffic accidents do not necessarily get solved by the construction of new infrastructure. Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap. The purpose of transportation and mobility is to gain access to destinations, activities, services, and goods. Thus, access is the ultimate objective of transportation. As a result, urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods. Urban form and the functionality of the city are therefore a major focus of this report, which highlights the importance of integrated land use and transport planning. This new report of the United Nations Human Settlements Programme (UN-Habitat), the world's leading authority on urban issues, provides some thought-provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems. The Global Report on Human Settlements is the most authoritative and up-to-date global assessment of human settlements conditions and trends. Preceding issues of the report have addressed such topics as Cities in a Globalizing World, The Challenge of Slums, Financing Urban Shelter, Enhancing Urban Safety and Security, Planning Sustainable Cities, and Cities and Climate Change.

Innovation Beyond Technology Sébastien Lechevalier, 2019-08-02 The major purpose of this book is to clarify the importance of non-technological factors in innovation to cope with contemporary complex societal issues while critically reconsidering the relations between science, technology, innovation (STI), and society. For a few decades now, innovation, mainly derived from technological advancement, has been considered a driving force of economic and societal development and prosperity. With that in mind, the following questions are dealt with in this book: What are the non-technological sources of innovation? What can the progress of STI bring to humankind? What roles will society be expected to play in the new model of innovation? The authors argue that the majority of so-called technological innovations are actually socio-technical innovations requiring huge resources for financing activities, adapting regulations, designing adequate policy frames, and shaping new uses and new users while having the appropriate interaction with society. This book gathers multi- and trans-disciplinary approaches in innovation that go beyond technology and take into account the inter-relations with

social and human phenomena Illustrated by carefully chosen examples and based on broad and well informed analyses it is highly recommended to readers who seek an in depth and up to date integrated overview of innovation in its non technological dimensions

Green Keynesianism and the Global Financial Crisis Kyla Tienhaara, 2018-04-17 It is widely accepted that limiting climate change to 2 C will require substantial and sustained investments in low carbon technologies and infrastructure However the dominance of market fundamentalism in economic thinking for the past three decades has meant that governments have generally viewed large spending programs as politically undesirable In this context the Global Financial Crisis GFC represented a huge opportunity for proponents of public investment in environmental projects or Green Keynesianism This book examines the experience of Australia Canada Japan Korea and the United States with Green Keynesian stimulus programs in the wake of the GFC Unfortunately on the whole the cases do not provide much optimism for proponents of Green Keynesianism Much less funding than was originally allocated to green programs was actually spent in areas that would produce an environmental benefit Furthermore a number of projects had negligible or even detrimental environmental outcomes While the book also documents several success stories the research indicates overall that more careful consideration of the design of green stimulus programs is needed In addition to concrete policy advice the book provides a broader vision for how governments could use Keynesian policies to work toward creating an ecological state This book will be of great interest to students and scholars of environmental politics environmental economics political economy and sustainable development **A University Education** David Willetts, 2017-11-17 Universities have a crucial role in the modern world In England entrance to universities is by nation wide competition which means English universities have an exceptional influence on schools a striking theme of the book This important book first investigates the university as an institution and then tracks the individual on their journey to and through university In *A University Education* David Willetts presents a compelling case for the ongoing importance of the university both as one of the great institutions of modern society and as a transformational experience for the individual The book also makes illuminating comparisons with higher education in other countries especially the US and Germany Drawing on his experience as UK Minister for Universities and Science from 2010 to 2014 the author offers a powerful account of the value of higher education and the case for more expansion He covers controversial issues in which he was involved from access for disadvantaged students to the introduction of 9 000 fees The final section addresses some of the big questions for the future such as the the relationship between universities and business especially in promoting innovation He argues that the two great contemporary trends of globalisation and technological innovation will both change the university significantly This is an authoritative account of English universities setting them for the first time in their new legal and regulatory framework □□□□□□ □□□□□□ (□□□□□□)

Carson,J. Elmo Rawling III,J. Michael Daniels,John W. Attig,2019-11-04 Over the course of his 43 year career James C Knox conducted seminal research on the geomorphology of the Driftless Area of southwestern Wisconsin His research covered wide ranging topics such as long term land scape evolution in the Driftless Area responses of floods to climate change since the last glaciation processes and timing of floodplain sediment deposition on both small streams and on the Mississippi River impacts of European settlement on the landscape and responses of stream systems to land use changes This volume presents the state of knowledge of the physical geography and geology of this unglaciated region in the otherwise glaciated Midwest with contributions written by Knox prior to his passing in 2012 and by a number of his former colleagues and graduate students *Steel Odyssey* Ohjoon KWON,JOO Choi,Hae-Geon LEE,2024-07-03 In this wide ranging interdisciplinary work the authors draw on history anthropology and materials engineering to present a comprehensive and ambitious examination of the multifaceted roles of iron and steel throughout history and the current and future challenges faced by the steel industry Ohjoon Kwon Joo Choi and Hae Geon Lee provide readers with an in depth understanding of the history of iron and steel and their impact on human society from a materials engineering perspective They begin by describing the characteristics of iron and steel and the history of human use of and interaction with these metals by compiling the fundamental knowledge necessary to understand iron s unique properties and metallurgical phenomena Following this they explain the influence of steel on human society and culture focusing on Industrial Revolution and warfare They also give examples that are rarely discussed elsewhere such as developments in Asia or iron s influence on thought and philosophy using Confucianism and Marxism as examples Readers will then be able to apply this contextual knowledge to address the profound impact of emerging challenges such as global environmental issues and the Fourth Industrial Revolution Despite the technical nature of this book all terminology is fully explained to facilitate better comprehension for those who may not possess an engineering education or a direct interest in metallurgy This book is therefore invaluable not only as a technical book but also as a guide to the development history of human civilization and its future challenges **From GCSEs to EBCs** Great Britain. Parliament. House of Commons. Education Committee,2013 The Government s plans for replacing GCSEs with new English Baccalaureate Certificates in some subjects is trying to do too much too fast Introducing several fundamental changes at the same time and to a tight timetable will jeopardise the quality of the reforms and may threaten the stability of the wider exam system GCSEs need significant improvements in order to restore public confidence in the exam system but the Government still needs to make the case that the GCSE brand is so

discredited that it is beyond repair MPs are also concerned about the impact of the changes on subjects outside the English Baccalaureate where students will be taking GCSEs for some time to come according to the Government's plans The report also questions how well the Government's proposals will serve lower attaining pupils who are often the most disadvantaged There is no evidence that the proposed changes will help to tackle under achievement or narrow the attainment gap between the richest and poorest students any more effectively than GCSEs The Government is also called upon to re think its plans for a Statement of Achievement specifically for lower attaining pupils MPs agree that changes are needed to the way in which exams are run but they raise serious concerns about franchising subjects to exam boards The report is critical of the Government's decision to abolish some GCSEs before publishing the outcomes of the National Curriculum Review and its proposed changes to the school accountability system MPs also note the wide ranging stakeholder opposition to many of the Government's proposals
