

Introducing the Peripheral IV (PIV) Documentation Form:

Introductory statement:

Peripheral intravenous cannulation is a common procedure carried out to allow rapid and accurate administration of medication and fluid [Endscott et al, 2006]. There are risks associated with this placement, the most common being phlebitis. Phlebitis is caused by inflammation to the vein at a cannula access site with a mechanical, chemical or infective cause. Excellent technique including site and device choice and good infection control techniques are paramount in preventing this problem.

(Higginson & Parny, 2011).

This paper will discuss the development of the Peripheral Intravenous Documentation form at a large District Health Board hospital providing care for a large geographical region.

Background

Two years ago I attended the NNNZ conference in Rotorua. I was particularly impressed with the presentation by Andrew Jackson on the Visual Infusion Phlebitis Scoring system (VIP) as well as the presentation on IV complications / infections. When I returned to work I set about presenting this information to the orthopaedic ward nurses. I developed a poster to challenge them regarding IV safety and saving lines – [see appendix A]. I gave education sessions on the VIP score and the risks of infection and encouraged nurses to use this as their documentation. I put up little posters on every available shelf area where IV supplies were held to encourage 15 second scrub the hub.

When seconds count – see count on your
Scrub the Hub 15 seconds – then allow to dry

The Visual Infusion Phlebitis Score (VIP) is a tool recommended by the Royal College of Nursing (and subsequently the Intravenous Nurses of NZ – INNZ). It was first developed by Jackson in 1998. This scoring system is now widely used as a valid and reliable method of determining when an IV line should be removed (Gallant & Schultz, 2006). Cleaning with 70% Alcohol (and 2% Chlorhexidine, at WHDHB) for 15 seconds using a scrubbing action has been shown to reduce bacterial contamination of the hub of the IV line. The term “scrub the hub” has been coined to remind staff to do this (Lockman et al, 2011 and Kaler, 2007).
