**Mathematical Structures for Computer Graphics** Steven Janke, 2014 A comprehensive exploration of the mathematics behind the modeling and rendering of computer graphics scenes *Mathematical Structures for Computer Graphics* presents an accessible and intuitive approach to the mathematical ideas and techniques necessary for two and three dimensional computer graphics Focusing on the significant mathematical results the book establishes key algorithms used to build complex graphics scenes Written for readers with various levels of mathematical background the book develops a solid foundation for graphics techniques and fills in relevant graphics details often overlooked in the literature Rather than use a rigid theorem proof approach the book provides a flexible discussion that moves from vector geometry through transformations curve modeling visibility and lighting models *Mathematical Structures for Computer Graphics* also includes Numerous examples of two and three dimensional techniques along with numerical calculations Plenty of mathematical and programming exercises in each chapter which are designed particularly for graphics tasks Additional details at the end of each chapter covering historical notes further calculations and connected concepts for readers who wish to delve deeper Unique coverage of topics such as calculations with homogeneous coordinates computational geometry for polygons use of barycentric coordinates various descriptions for curves and L system techniques for recursive images *Mathematical Structures for Computer Graphics* is an excellent textbook for undergraduate courses in computer science mathematics and engineering as well as an ideal reference for practicing engineers researchers and professionals in computer graphics fields The book is also useful for those readers who wish to understand algorithms for producing their own interesting computer images

*The Mathematical Structure of Raster Graphics* Eugene L. Fiume, 2014-05-10 *The Mathematical Structure of Raster Graphics* presents a mathematical characterization of the structure of raster graphics a popular and diverse form of computer graphics The semantics and theory of the mathematical structure of raster graphics are discussed Notations that help to clarify some of the concepts generally considered to be fundamental to computer graphics are included Comprised of seven chapters this book begins with a description of a general framework for specifying and manipulating scenes Basic graphic entities called primitive graphic objects are defined using a simple notation over a Euclidean space The reader is then introduced to a semantics of visibility a mathematical semantics of rendering developed using the very basic notion of measure and a mathematical formalization of bit mapped graphics A framework for specifying illumination models is also described along with the complexity of abstract ray tracing This monograph will be a useful resource for undergraduate and graduate students researchers and practitioners in the fields of mathematics and computer graphics and to those with some basic computer graphics background
