 wide international audience Beyond Shanghai and PISA Binyan Xu,Yan Zhu,Xiaoli Lu,2021-05-07 This book seeks to
 illustrate the research on mathematics competencies and disposition in China according to the conceptual development and
 empirical investigation perspective Mathematics education in China has a distinguishing feature a focus of attention to
 mathematical competency Paradoxically there has not been an explicit refined and measurable evaluation system in place to
 assess mathematical competency in China While academic achievement surveys or evaluations are common these can only
 give an overall conclusion about mathematical thinking skills or problem solving abilities In response to this deficiency China
 is beginning to carry out national projects that emphasize defining both a conceptual framework on core competencies in
 school mathematics and developing a corresponding assessment framework Thus the main focus of this volume is the current
 investigations of different mathematics competencies and mathematical disposition of Chinese students with the aim of
 promoting interaction between domestic and international student performance assessment to provide a more
 comprehensive understanding of mathematics competencies and disposition in mainland China and to stimulate innovative
 new directions in research The primary audience of this volume is the large group of researchers interested in mathematics

 of digital technologies through a detailed learning framework considering different groups of users and how they can be
